O.R. BOOK 1293 PAGE 641

DESCRIPTION:

A tract of land located in the South ½ of Section 32, Township 9 South, Range 19 East, Alachua County, Florida, being more particularly described as follows:

For a point of reference, commence of the Southwest corner of said Section 32; thence run North 00deg. 19min. 21sec. East, a distance of 151.71 feet to an intersection with the centerline of survey of State Road No. 26 (as shown on D.O.T. right of way map, Section 26070-2532, sheet 3 of 6) being centerline of survey station 556+61.64 and a non-tangent point on a curve concave Southerly having a radius of 8594.37 feet; thence run along said centerline of survey, along said curve an arc distance of 897.88 feet through a central angle of 05deg. 59min. 09sec., having a chord bearing and distance of North 86deg. 01min. 57sec. East, and 897.47 feet to the Point of Tangency of said curve being station 565+59.52; thence run North 89deg. 01min. 31sec. East, along said centerline, to a nail and cap #2678 being at station 574+98.38, said cap and nail being on said centerline, a distance of 10.00 feet from the West end of a median strip located South of a retention basin (as shown on said right of way map, sheet 2 of 6); thence run North 00deg. 58min. 29sec. West, a distance of 50.00 feet to the Northerly right of way line of said State Road No. 26 to the Point of Beginning; thence from said POINT OF BEGINNING, run South 89deg. 01min. 31sec. West, along said Northerly right of way line, a distance of 936.14 feet to a point of tangency of a curve concave Southerly, having a radius of 8644.37 feet; thence run along said curve, being said Northerly right of way line an arc distance of 247.52 feet through a central angle of 01deg. 38min. 26sec. having a chord bearing and distance of South 88deg. 12min. 18sec. West and 247.51 feet; thence run North 00deg. 58min. 29sec. West, a distance of 2406.72 feet to intersect the North line of the Southwest ¼ of said Section 32 as monumented by Perry C. McGriff Company (Su. No. 5233, dated March 23, 1967), thence run North 89deg. 26min. 51sec. East, along said North line of the Southwest ¼, a distance of 1115.28 feet; thence run South 00deg. 58min. 29sec. East, on a line extending straight from the Western boundary of said retention basin, a distance of 2134.96 feet to the Southwest corner of said retension basin, a distance of 68.38 feet; thence run South 00deg. 58min. 29sec. East a distance of 260.00 feet to the said POINT OF BEGINNING.

Said parcel contains 61.838 acres, more or less.

O.R. 1293 PAGE 642

EXHIBIT "A"

EXHIBIT "B" TO WARRANTY DEED FROM RICHARD M. WHITE, JOINED BY HIS WIFE, BEVERLY M. WHITE, AND INDUSTRIAL CONSULTANTS AND MANAGEMENT COMPANY, AS GRANTORS, AND FOURTEENTH STREET CHURCH OF CHRIST, INC., AS GRANTEE, DATED July 28, 1980.

An easement over a parcel of land located in the South ½ of Section 32, Township 9 South, Range 19 East, Alachua County, Florida for the purpose of ingress and egress being more particularly described as follows:

For a point of reference, commence at the Southwest corner of said Section 32, thence run North 00deg. 19min. 21sec. East, a distance of 151.71 feet to an intersection with the centerline of survey of State Road No. 26 (as shown on D.O.T. right of way map, section 26070-2532, sheet 3 of 6) being centerline of survey station 556+61.64 and a non-tangent point on a curve concave Southerly having a radius of 854.37 feet; thence run along said centerline of survey along said curve an arc distance of 897.88 feet through a central angle of 05deg. 59min. 09sec., having a chord bearing and distance of North 86deg. 01min. 57sec. East, and 897.47 feet to the Point of Tangency of said curve being station 565+59.52; thence run North 02deg. 07min. 40sec. East, a distance of 50.07 feet to the Point of Tangency of the Northerly right of way curve of State Road No. 26 said right of way curve being concave Southerly and having a radius of 8644.37 feet; thence run Westerly along said curve through a central angle of 01deg. 38min. 26sec. along an arc a distance of 247.52 feet having a tangent distance of 122.42 feet and a chord bearing and distance of South 88deg. 12min. 18sec. West, and 247.51 feet to the Point of Beginning, being the Southwest corner of a tract of land surveyed by the Perry C. McGriff Company (Job number M-32-80, dated Feb. 1980); thence from said POINT OF BEGINNING, run North 00deg. 58min. 29sec. West, along the West property line of said tract of land, a distance of 60.00 feet; thence run North 87deg. 37min. 53sec. East, a distance of 74.40 feet; thence run South 00deg. 58min. 29sec. East, a distance of 60.00 feet to an intersection with the Northerly right of way curve of State Road No. 26, said curve being concave Southerly and having a radius of 8644.37 feet; thence run Westerly along said curve through a central angle of 00deg. 29min. 35sec. an arc distance of 74.40 feet, having a tangent distance of 37.20 feet and a chord bearing and distance of South 87deg. 37min. 53sec. West, and 74.40 feet to clsoe on said POINT OF BEGINNING.

Said ingress and egress easement contains 0.102 acres, more or less.

7/21/80

EXHIBIT "C" TO WARRANTY DEED FROM RICHARD M. WHITE, JOINED BY HIS WIFE, BEVERLY M. WHITE, AND INDUSTRIAL CONSULTANTS AND MANAGEMENT COMPANY, AS GRANTORS, AND FOURTEENTH STREET CHURCH OF CHRIST, INC., AS GRANTEE, DATED July 28, 1980.

An easement over a parcel of land located in the South ½ of Section 32, Township 9 South, Range 19 East, Alachua County, Florida for the purpose of ingress and egress being more particulary described as follows;

For a point of reference commence at the Southwest corner of said Section 32; thence run North 00deg. 19min. 21sec. East, a distance of 151.71 feet to an intersection with the centerline of survey of State Road No. 26 (as shown on D.O.T. right of way map, section 26070-2532, sheet 3 of 6) being centerline of survey station 556+61.64 and a non-tangent point on a curve concave southerly having a radius of 8594.37 feet; thence run along said centerline of survey, along said curve an arc distance of897.88 feet through a central angle of 05deg. 59min. 09sec., having a chord bearing and distance of North 86deg. 01min. 57sec. East, and 897.47 feet to the Point of Tangency of said curve being station 656+59.52; thence run North 02deg. 07min. 40sec. East, a distance of 50.07 feet to the point of tangency of the northerly right of way line of State Road No. 26; thence from said point of tangency run North 89deg. 01min. 31sec. East, along said northerly right of way line a distance of 936.86 feet to the Point of Beginning being the Southeast corner of a tract of land surveyed by the Perry C. McGriff,Co. (Job No. M-32-80, dated Feb.,1980); thence from said POINT OF BEGINNING run South 89deg. 01min. 31sec. West, along the northerly right of way line of State Road No. 26, a distance of 54.70 feet, thence run North 00deg. 58min. 29sec. West, a distance of 60.00 feet; thence run North 89deg. 01min. 31sec. East, a distance 54.70 feet, to an intersection with the easterly property line of said tract of land; thence run South 00deg. 58min. 29sec. East, along said easterly property line, a distance of 60.00 feet to close on said POINT OF BEGINNING.

Said ingress and egress easement contains 0.102 acres, more or less.

RE: Tree Report for Lullwater at Fort Clarke, Alachua County, FL

Dear Reviewer:

The following Tree Report describes the existing trees and vegetation of the proposed Lullwater at Fort Clarke development site. An on-site discussion with the Alachua County Growth Management Forester/Landscaping Inspector regarding condition and mitigation was not possible prior to this submittal. As such, the tree ratings proposed below are recommendations for the County Forester/Landscaping Inspector's consideration and review during an on-site meeting that will be scheduled following this submittal. At that time, the Pre-Design Onsite Meeting form will also be completed. The following is submitted for the purposes of Alachua County Growth Management Preliminary Development Review and includes information about each heritage tree with a corresponding tree location map.

Site Information

Project Name	Lullwater at Fort Clarke Development
Consultant Project Number	20-014 Manley Design / 403-19-01 JBPro
Project Location	An undeveloped site located between Newberry Road and NW 23rd Avenue on the west side of Ft. Clarke Boulevard
Project Tax Parcel Number	06326-001-000
Site Zoning	'R-1A' / Residential Single Family
Site Area	25.64 Acres
Site Status	Undeveloped
Date of Pre-Design Onsite Mtg	Not conducted yet – Will schedule following this submittal

Typical Existing Conditions

The site is currently undeveloped and has signs that it was previously a tree farm including trees growing in rows, pits from removed trees, landscape cloth, planter pots, and a central well area. Southern, western, and northern edges include a more native mixed hardwood forest of Pines and Laurel, Water, Red, and Live Oaks. Central site areas include lines of Live Oaks with dense undergrowth or more natural forest areas of predominantly Pines in the northeastern corner. The site elevation drops from the south to the north, with northern areas significantly lower and of a different ecosystem. Exotic invasive species were not observed on site other than a small area of what appeared to be Cogon Grass, which was located near the site's central entry drive and within remnant tree nursery areas. Site adjacencies include the Eagle Point neighborhood to the south and west, Alachua County Fire-Rescue Station No. 16 to the north, and Ft. Clarke Blvd. to the east.

Existing Trees and Vegetation

Note: The below chart includes information on regulated heritage trees that exist on this site at the time of the site review. Mitigation is required if these trees are removed and include inch:inch replacement for all but Laurel and Water Oaks, Slash and Loblolly Pine, and Sweetgum, which instead require 1 tree: 1 tree replacement. The proposed status of each tree regarding 'remain' or 'remove' is based on the site design at the time of preparation of this report, but this status may change as the project progresses through final design.

EXECUTIVE SUMMARY

Verde Environmental Co. (Verde) was contracted by JBrown Professional Group to conduct a Natural Resource Assessment of the undeveloped 25.64-acre property located at 1404 Ft. Clarke Blvd. in Gainesville, FL. The subject property is also identified as Alachua County Parcel 06326-001-000, and is located approximately 2,000 feet north of the intersection of Ft. Clarke Blvd. and Newberry Rd. (SR-26). The site is bound by Ft. Clarke Blvd. to the east, Alachua County Fire Rescue (Station 16) to the north, and the Eagle Point subdivision to the west and south. The surrounding landscape is almost completely developed as residential and commercial land uses.

This Natural Resource Assessment was performed in accordance with the Alachua County Comprehensive Plan 2002, as amended, Conservation Open Space Element Policy 3.4.1. The intent of this assessment was to identify natural and historical resources recognized in Chapter 406 of the ULDC and outlined in the Alachua County Environmental Resources Assessment Checklist. These resources include, but are not limited to the following: hydrologic conditions, geologic features, historical resources, significant natural communities, and listed species habitat. The focus of the investigation was to identify and assess the natural resources existing on, and adjacent to the site, as well as determine the presence and extent of any ecologically significant areas, which may ultimately be designated as a Conservation Management Area.

This Natural Resource Assessment resulted in the identification of one item requiring consideration related to the potential development of this site: High Aquifer Recharge Areas. An Alachua County, Environmental Resource Assessment checklist is enclosed as Appendix A of this report.

The project site is located within a High Aquifer Recharge Area as defined in Chapter 406, Article 8 (Springs and High Aquifer Recharge Areas) of the ULDC. As such, the developer(s) may be required to comply with the Stormwater Element of the Comprehensive Plan and Chapters 407 (General Development Standards) and 353 (Hazardous Materials) of the ULDC.

PROJECT OVERVIEW

Verde Environmental Co. (Verde) was contracted to conduct a Natural Resource Assessment on Alachua County Parcel 06326-001-000 in Gainesville, FL. The undeveloped 25.64-acre parcel is located at 1404 Ft. Clarke Blvd. in Gainesville, FL. This Natural Resource Assessment was performed in accordance with the Alachua County Comprehensive Plan 2002, as amended, Conservation Open Space Element Policy 3.4.1, and completed to identify natural and historical resources recognized in Chapter 406 of the ULDC and outlined in the Alachua County Environmental Resources Assessment Checklist. These include, but are not limited to the following: hydrologic conditions, geologic features, historical resources, significant natural communities, and listed species habitat. The focus of the investigation was to identify and assess the natural resources existing on, and adjacent to the site, as well as determine the presence and extent of any ecologically significant areas, which may ultimately be designated as a Conservation Management Area.

PROJECT LOCATION

The subject property is situated along the west side of Ft. Clarke Blvd. approximately 2,000 feet north of the intersection of Ft. Clarke Blvd. and Newberry Rd. (SR-26) (Figure 1). The site is bound by Ft. Clarke Blvd to the east, Alachua County Fire Rescue (Station 16) to the north, and the Eagle Point subdivision to the west and south. The surrounding landscape is almost completely developed as residential and commercial land uses.

METHODOLOGY

The collection of data pertinent to this report included both a desktop review of available datasets and a site reconnaissance field visit to the property. Prior to visiting the site, Verde scientists reviewed available Geographic Information Systems (GIS) datasets to evaluate the potential presence of environmental resources within and adjacent to the subject property. The information obtained during the preliminary GIS review was considered while conducting the site visit. Conversely, the information collected during the site visit was incorporated into the information provided in this report.

Verde scientists conducted a site reconnaissance field visit on August 27, 2019. During this site visit, the subject property was thoroughly traversed on foot. The condition of onsite habitats, existing community structure, and direct or indirect observations (i.e., scat, tracks, burrows, nests, etc.) of wildlife, listed species and the extent of potential listed species habitats were recorded. Verde scientists evaluated onsite vegetative communities in accordance with the Florida Land Use, Cover, and Forms Classification System (FLUCCS, FDOT 1999). While onsite we also identified and recorded any existing, potential, or suspected contamination on the subject parcel. Photographs taken during the site reconnaissance visits are enclosed in Appendix B.

Review of Geographic Information Systems Data

GIS data and several maps were reviewed to aid in characterizing the subject property and to prepare for the field visit. This data included a U.S. Geological Survey (USGS) quadrangle (Figure 2); various aerial photographs; U.S. Department of Agriculture, Natural Resources Conservation Service soil maps; U.S. Fish and Wildlife Service, National Wetland Inventory (NWI); LiDAR elevation models; Federal Emergency Management Agency (FEMA) flood zones; and a St. Johns River Water Management District (SJRWMD) Florida Land Use, Cover and Forms Classification System (FLUCCS) map.

Review of Aerial Photographs

Current (2017) true color aerial photographs were obtained from the Florida Department of Transportation (FDOT) for review of the subject property and other parcels within its immediate vicinity (Figure 3). Additional aerial photographs dating to 1995 were obtained from the Land Boundary Information System (LABINS), Bureau of Survey and Mapping, Florida Department of Environmental Protection (FDEP). These historical aerial photographs were used to evaluate the past property uses and potential presence of environmental resources.

Field Assessment

Verde completed an ecological reconnaissance of the subject property on August 27, 2019. Our scientists conducted a thorough survey of the subject property by traversing the property's perimeter and walking meandering belt transects through the interior of the site. One hundred percent of the property was visually inspected during this site visit. Existing conditions both on-site and extending to 200 ft (61.0 m) off-site were identified and described. Observations of wildlife were recorded, including any listed species and their potential habitats. Our scientists also noted any additional natural resources or pertinent characteristics identified during the site visit. The weather condition during the field survey was sunny, 88-92° Fahrenheit, with light winds between 0 and 5 mph.

NATURAL RESOURCES

Potential natural resources evaluated as part of this assessment are itemized and discussed below.

Surface Waters (ponds, lakes, streams, springs, etc.)

No surface waters were observed on or adjacent to the subject property.

Wetlands

There are no wetland habitats on or adjacent to the subject property, as defined by the Florida Unified Wetland Delineation Methodology (Chapter 62–340, F.A.C.) or the Army Corps of Engineers Wetland Delineation Manual (1987). In addition, no onsite or adjacent wetland communities were identified by the NWI or the SJRWMD FLUCCS datasets (Figure 4).

Surface Water or Wetland Buffers

These features were not observed within or adjacent to the subject property.

Floodplains (100-year)

The subject property is located outside the 500-year floodplain as identified by FEMA. Additionally, no Special Flood Hazard Areas have been mapped within, or adjacent to, the subject property (Figure 4).

Special Area Study Resource Protection Areas

The subject property is not located near or within any existing or proposed Special Area Study Resource Protection Areas.

Strategic Ecosystems (within or adjacent to mapped areas)

The subject property is located approximately 1.3 miles east-southeast of the Pine Hill Forest Strategic Ecosystem and approximately 1.0 miles east-northeast of the Buzzards Roost Strategic Ecosystem (Figure 5) as identified in the KBN study.

Significant Plant and Wildlife Habitat

Prior to conducting the field site visit, Verde scientists reviewed the SJRWMD FLUCCS map as updated in 2012. During the site visit, we classified/verified two different land use types (Pine Flatwoods (FLUCCS 4110) and Upland Mixed Coniferous/Hardwoods (FLUCCS 4340)) within the subject property (Figure 6). Two additional land uses (residential (FLUCCS 1200) and commercial/institutional (FLUCCS 1700)) were observed and described immediately adjacent to the subject property. The condition of these habitats is typical for the surrounding landscape, and the species composition is as expected for forested and herbaceous plant communities surrounded by rural, residential, and commercial land uses. Each onsite community is discussed in more detail below. It is Verde's opinion that the existing condition of onsite communities does not represent significant habitat.

Residential, Medium Density (FLUCCS 1120) – Offsite

This area includes the Eagle Point subdivision located to the west and south of the subject property. The subdivision was built around the turn of the century and the average lot size is approximately 0.25 acres.

Commercial/Institutional (FLUCCS 1700) – Offsite

This land use includes the Alachua County Fire Rescue (Station 16) to the north and the HarborChase of Gainesville Retirement Community to the east. These developments were also built around the turn of the century.

Pine Flatwoods (FLUCCS 4110) - +/-8.97 Acres Onsite

This community includes the northern third of the property and extends offsite farther to the north. It is characterized by a sparse canopy of mature pines and scattered hardwood trees. A dense shrub stratum has developed due to lack of management and the absence of periodic fires that typically maintain an open understory stratum commonly found within pine flatwoods communities. The open canopy stratum is dominated by longleaf and loblolly pines (*Pinus palustris* and *Pinus taeda*, respectively) intermixed with a scattering of laurel oak (*Quercus laurifolia*), water oak (*Quercus nigra*), southern red oak (*Quercus falcata*), southern magnolia (*Magnolia grandiflora*), sugarberry (*Celtis laevigata*), and sweetgum (*Liquidambar styraciflua*). Most canopy trees had a diameter at breast height (dbh) of 10-20 inches. The dense understory stratum was dominated by canopy tree saplings as well as winged sumac (*Rhus copallinum*), camphor tree (*Cinnamomum camphora*), southern catalpa (*Catalpa bignonioides*), black cherry (*Prunus serotina*), Carolina laurel cherry (*Prunus caroliniana*), and tree of heaven (*Ailanthus altissima*). These shrubs and tree saplings were often cover by a dense blanket of various vines including: grape vine (*Vitis* sp.), green briar (*Smilax* sp.), yellow jessamine (*Gelsemium sempervirens*), pepper vine (*Nekemias arborea*), Virginia creeper

(*Parthenocissus quinquefolia*) and trumpet creeper (*Campsis radicans*). Due to the dense understory growth, there was very little groundcover vegetation. When present, the groundcover consisted of beggar ticks (*Bidens alba*), blackberry (*Rubus* sp.), goldenrod (*Solidago* sp.), poison ivy (*Toxicodendron radicans*), American beautyberry (*Callicarpa americana*), devil's walking stick (*Aralia spinosa*), ebony spleenwort (*Asplenium platyneuron*), and basket grass (*Oplismenus setarius*).

Upland Mixed Coniferous/Hardwoods (FLUCCS 4340) - +/-16.67 Acres Onsite

This land use is observed over the southern two-thirds of the property and was formerly a tree nursery that specialized in field grown ball and burlap trees. The existing canopy predominantly consists of various trees grown in rows as part of the nursery operations. Large pots, irrigation hoses, and soil separation fabric were also frequently encountered throughout the Upland Mixed Coniferous/Hardwood community as further evidence of the former nursery. While the canopy was closed (70-80 percent closure) near the property boundary, the majority of the habitat consisted of an open canopy (10-30 percent closure) dominated by laurel oak, live oak (*Quercus virginiana*), loblolly pine, black cherry, sweetgum, sugar berry, and Chinese tallow tree (*Triadica sebifera*). Most canopy trees ranged in size from 4 to 14 inches dbh. The moderately dense understory consisted of canopy tree saplings as well as camphor tree, winged sumac, southern magnolia, hickory (*Carya* sp.), red maple (*Acer rubrum*), crape myrtle (*Lagerstroemia indica*), common persimmon (*Diospyros virginiana*), silk tree (*Albizia julibrissin*), red cedar (*Juniper virginiana*), and groundsel tree (*Baccharis halimifolia*). The dense groundcover stratum was dominated by bluestem (*Andropogon* sp.), showy rattlebox (*Crotalaria spectabilis*), beggar tick, blackberry, goldenrod, hairy indigo (*Indigofera hirsuta*), yellow jessamine, poison ivy, green briar, grape vine, ebony spleenwort, cogon grass (*Imperata cylindrica*), beggar lice (*Desmodium* sp.), flat sedge (*Cyperus* sp.), ragweed, (*Ambrosia artemisiifolia*), skunk vine (*Paederia foetida*), cypress vine (*Ipomoea quamoclit*), Virginia creeper, pepper vine, and American beautyberry.

Listed Species/Listed Species Habitats (FNAI S1–S3; State or Federally E, T, SSC)

No listed species were observed within the project area during the field visits. Verde Scientists also reviewed a current Florida Natural Areas Inventory (FNAI) Biodiversity Matrix (Appendix C) to identify any documented, likely or potentially occurring listed or rare plant species within the property or surrounding area. Considering the habitats found onsite and species identified in the FNAI Biodiversity Matrix, there is a potential for the property to support the incised groove-bur (*Agrimonia incisa*), Flyr's brickell-bush (*Brickellia cordifolia*), many-flowered grass-pink (*Calopogon multiflorus*), Florida spiny pod (*Matelea floridana*), and Florida mountain-mint (*Pycnanthemum floridanum*). However, while these species are often found in upland hardwood and mixed conifer/hardwood forests, their presence is unlikely due to the absence of periodic fires and past land use and land management.

No listed animal species or their preferred habitat was observed during the field site visit. Although the gopher tortoise (*Gopherus polyphemus*) is often found within well drained soils with abundant groundcover vegetation, as was observed within the Upland Mixed Coniferous/Hardwood community discussed above, no tortoise burrows were found onsite. Furthermore, due to adjacent land uses and land cover, it is unlikely that tortoises would be found within the landscape surrounding the subject property.

Due to the absence of gopher tortoises and their burrows, it is less likely that commensurate species such as the gopher frog (*Lithobates capito*), Eastern indigo snake (*Drymarchon couperi*) or Florida

mouse (*Podomys floridanus*) would be found onsite as these species often utilize tortoise burrows during various times of the year or their life cycle. Furthermore, the subject property and surrounding landscape lacks other habitats these commensurate species utilize for breeding and/or foraging.

Gopher frogs are nocturnal and often utilize tortoise burrows as shelter during the day. However, the lack of their preferred habitat (dry sandhill and scrub) as well as suitable breeding sites (e.g. ephemeral grassy ponds and cypress heads) make the presence of this species unlikely.

The Eastern indigo snake will often take refuge in gopher tortoise burrows during colder winter months, but it is also unlikely to occupy the subject property due to the lack of nearby wetlands where the species feeds during the summer.

The upland hardwoods forest community may provide appropriate habitat for the Florida mouse (*Podomys floridanus*); however, the presence of the Florida mouse is unlikely considering it has been primarily or exclusively documented in fire-maintained xeric habitats.

In addition to the wildlife species discussed above, the FNAI Biodiversity Matrix also noted a potential presence of the short-tailed snake (*Lampropeltis extenuata*), Florida pine snake (*Pituophis melanoleucus mugitus*), Florida burrowing owl (*Athene cunicularia floridana*), Sherman's fox squirrel (*Sciurus niger shermani*), woodstork (*Mycteria americana*), red-cockaded woodpecker (*Picoides borealis*), and Florida sandhill crane (*Grus canadensis pratensis*). However, these species are not likely to be found onsite due to a lack of preferred habitat. The short-tailed snake, Florida pine snake, and Florida burrowing owl would not likely be found onsite since these species prefer dry sandhill, xeric hammock, or sand pine scrub or other sandy soils with a relatively open or absent canopy. The woodstork nests in deep-water swamps with mature canopies, and it forages in standing water. Neither of these habitats were found onsite. The red-cockaded woodpecker inhabits pine dominated flatwoods or forests with large mature pine trees and an open understory maintained by periodic fires and dominated by an array of forbs, grasses, and shrubs. The Florida Sandhill crane is frequently observed within wet prairies, freshwater marshes and pasturelands, often foraging within the transitional zones between the deeper marshes and adjacent prairies and pastures. The Sherman's fox squirrel prefers mature, fire maintained longleaf pine-turkey oak sandhills and flatwoods, or open live oak hammocks.

Recreation/Conservation/Preservation Lands

There are no recreation, conservation, or preservation lands located within or adjacent to the subject property (Figure 5). The nearest recreation and conservation lands are the Meadowbrook Golf Course located one mile to the northwest as well as the Robertson Conservation Easement and the Rock Mountain Bike Trail located approximately one mile to the southwest, near the Buzzard's Roost Strategic Ecosystem.

Significant Geological Features (caves, springs, sinkholes, etc.)

No significant geologic features were found within the subject property, and no limestone outcrops, boulders or stones were encountered during Verde's site visit. Additionally, available topographic data did not indicate the presence of any large depressions or sinkholes located onsite.

High Aquifer Recharge Areas

The site is located within a High Aquifer Recharge Area. Based on data provided by Alachua County, the Floridan aquifer is unconfined at this location. However, no site-specific soil boring information was obtained for this effort.

Wellfield Protection Areas

The subject property, and immediate vicinity, are not within any Wellfield Protection Areas.

Wells

Verde scientists observed one private water supply well on the subject property (Figure 7). No other wells were observed on or adjacent to the subject property.

Soils

Four soil mapping units are mapped within the Subject property. Approximately one half of the property is mapped as Arrendondo Fine Sand or Millhopper Sand. These two soil mapping units are mapped in the southwest and northeast corners of the property, respectively, and are most often associated with gently sloping, sandy uplands. The Arrendondo Fine Sand is further described as being well drained with rapid permeability and a water table at depths greater than 72 inches below the soil surface. The Alachua County Soil Survey states that dominant native vegetation historically observed on the Arrendondo Fine Sand included various pines (slash, loblolly, and longleaf), oaks (live, laurel, and water), and other hardwoods such as magnolia, sweetgum, hickory and dogwood. The Millhopper Sand, is similar to the Arrendondo Fine Sand except it is moderately well drained with a water table typically found at depths of 40-60 inches below the surface during the wettest months of most years.

The remainder of the property is mapped as Lochloosa Fine Sand (2-5, and 5-8 percent slopes). The Lochloosa Fine Sand is described as somewhat poorly drained with a water table within 20 to 30 inches of the soils surface for 1-3 weeks during the wetter periods of most years. The soil survey states that the Lochloosa soils were historically dominated by slash and loblolly pine, oaks, dogwood, hickory, magnolia, and sweetgum (Alachua County Soil Survey; Thomas et al., 1985).

Mineral Resource Areas

No mining operations occur on, or adjacent to, the subject property.

Topography/Steep Slopes

The topography of subject property can be described as convex with a highest elevation of approximately 134 feet NAVD-88 occurring in the west-central portion of the site. From there, the ground surface slopes down to approximately 120 feet along the south parcel boundary, 115 feet along Ft. Clark Blvd to the east, and 110 feet along the northern parcel boundary. This data did not suggest that any areas of significant relief or geologic features are present on the property, and none were found during the field site visit (Figure 9).

Historical and Paleontological Resources

Data from the Department of State, Florida Master Site File were used to determine the presence of any previously recorded historical or archeological resources within, or adjacent to, the subject property. Review of the Master Site File identified no historic structure on the subject property.

Furthermore, no structures or other indications of potential historical and paleontological resources were observed onsite. However, no archeological investigations were performed in conjunction with this effort.

Hazardous Materials Storage Facilities

There was no visual evidence of hazardous waste storage on, or adjacent to, the subject property. Additionally, a cursory review of accessible Environmental Records Databases reporting Hazardous Waste Generators or Storage Sites did not return any recorded locations near the property. However, this report did not include a thorough database review nor an investigation into previous land use or management practices.

Contamination (soil, surface water, groundwater)

There was no visual evidence of contamination of soils or surface water observed on, or adjacent to the subject property, and vegetation throughout the property was healthy and displayed no evidence of impairment. As such, this effort did not include analysis of soil, surface water, or groundwater samples.

DISCUSSION AND CONCLUSIONS

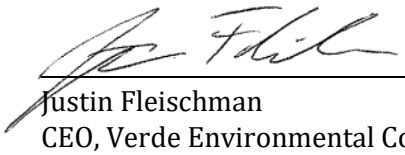
This Natural Resource Assessment resulted in the identification of one item requiring consideration related to the potential development of this site: High Aquifer Recharge Areas.

High Aquifer Recharge Area

In accordance with Chapter 406, Article 8 (Springs and High Aquifer Recharge Areas) of the ULDC, the subject property is located within a high aquifer recharge area and may require the developer(s) to comply with the Stormwater Element of the Comprehensive Plan and Chapters 407 (General Development Standards) and 353 (Hazardous Materials) of the ULDC.

SIGNATURES AND QUALIFICATIONS

I, Justin Fleischman, declare that, to the best of my professional knowledge and belief, I am qualified to complete this Natural Resource Assessment. I coordinated and supervised the data collection and regulatory review necessary to complete this assessment. I believe all the information provided above to be true as of the date of the site reconnaissance visits and the date of this report.



September 19, 2019

Justin Fleischman — Date

CEO, Verde Environmental Co.

Principal Environmental Scientist

Mr. Justin Fleischman, CEO of Verde Environmental Co., has over 10 years of professional experience managing and reviewing environmental projects. He specializes in environmental permitting, wetland assessment and mitigation, listed species surveys, habitat restoration, ecohydrology, environmental monitoring, stormwater management (NPDES), environmental audits (including compliance and transactional), and project management. Mr Fleischman holds an M.S. in Ecological Engineering/Systems Ecology from the University of Florida and a B.S. in Ecosystem Restoration and Management from the University of Wisconsin – Stevens Point.

Additional Personnel

Mr. Scott Blanford, COO of Verde Environmental Co. assisted and was under the responsible charge of Mr. Justin Fleischman for this Natural Resource Assessment. Mr. Blanford conducted supplemental data review and mapping of historical aerial imagery under the supervision of Mr. Fleischman in accordance with practice standards. Mr. Blanford holds a B.S. in Natural Resource Management from the University of Florida, and over 10 years of experience in the environmental consulting industry.

ENVIRONMENTAL RESOURCES ASSESSMENT CHECKLIST

Pursuant to Alachua County Comprehensive Plan 2002, as amended, Conservation Open Space Element Policy 3.4.1, applications for land use change, zoning change, and development approval shall be required to submit an inventory of natural resource information. The inventory shall include site specific identification, analysis and mapping of each resource present on or adjacent to the site. The identification and analysis shall indicate information sources consulted.

Natural Resources Checklist:

Check "Yes" for each resource or resource characteristic identified and discuss and provide supporting material.
Check "N/A" for each resource or resource characteristic not present or otherwise relevant to the application.

Biodiversity Matrix Query Results

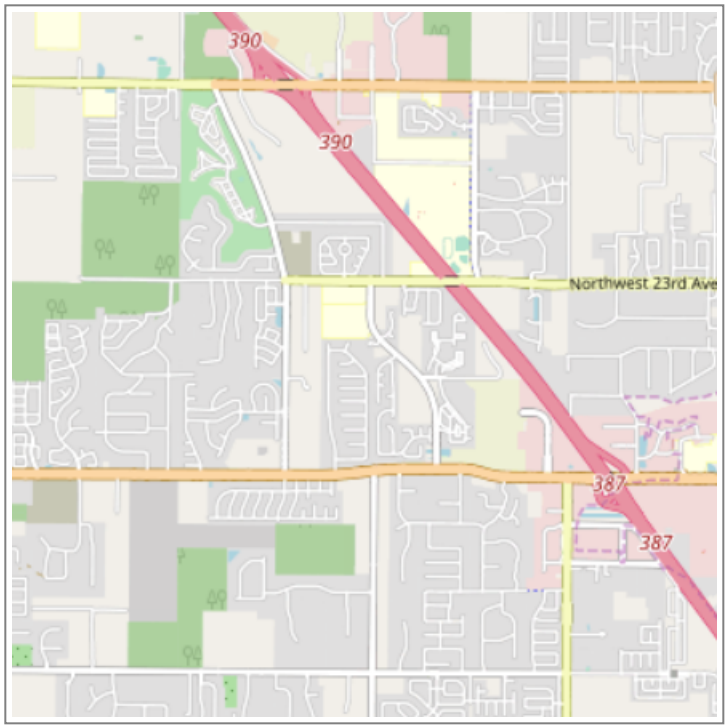
UNOFFICIAL REPORT

Created 8/22/2019

(Contact the FNAI Data Services Coordinator at 850.224.8207 or kbrinegar@fnai.fsu.edu for information on an official Standard Data Report)

NOTE: The Biodiversity Matrix includes only rare species and natural communities tracked by FNAI.

Report for 1 Matrix Unit: 25627



Descriptions

DOCUMENTED - There is a documented occurrence in the FNAI database of the species or community within this Matrix Unit.

DOCUMENTED-HISTORIC - There is a documented occurrence in the FNAI database of the species or community within this Matrix Unit; however the occurrence has not been observed/reported within the last twenty years.

LIKELY - The species or community is *known* to occur in this vicinity, and is considered likely within this Matrix Unit because:

1. documented occurrence overlaps this and adjacent Matrix Units, but the documentation isn't precise enough to indicate which of those Units the species or community is actually located in; *or*
2. there is a documented occurrence in the vicinity and there is suitable habitat for that species or community within this Matrix Unit.

POTENTIAL - This Matrix Unit lies within the known or predicted range of the species or community based on expert knowledge and environmental variables such as climate, soils, topography, and landcover.

Disclaimer

The data maintained by the Florida Natural Areas Inventory represent the single most comprehensive source of information available on the locations of rare species and other significant ecological resources statewide. However, the data are not always based on comprehensive or site-specific field surveys. Therefore, this information should not be regarded as a final statement on the biological resources of the site being considered, nor should it be substituted for on-site surveys. FNAI shall not be held liable for the accuracy and completeness of these data, or opinions or conclusions drawn from these data. FNAI is not inviting reliance on these data. Inventory data are designed for the purposes of conservation planning and scientific research and are not intended for use as the primary criteria for regulatory decisions.

Unofficial Report

These results are considered unofficial. FNAI offers a Standard Data Request option for those needing certifiable data.

EXECUTIVE SUMMARY

Verde Environmental Co. (Verde) was contracted to update the Natural Resource Assessment we completed in 2019 on Alachua County Parcel 06326-001-000 at 1404 Ft. Clarke Blvd. in Gainesville, FL. The 25.64-acre property is located approximately 2,000 feet north of the intersection of Ft. Clarke Blvd. and Newberry Rd. (SR-26). The site is bound by Ft. Clarke Blvd. to the east, Alachua County Fire Rescue (Station 16) to the north, and the Eagle Point subdivision to the west and south. The surrounding landscape is almost completely developed as residential and commercial land uses.

This Addendum, in conjunction with our 2019 report, is provided to satisfy the requirements of the Alachua County Comprehensive Plan 2002, as amended, Conservation Open Space Element Policy 3.4.1. Specifically, this work is intended to identify natural and historical resources recognized in Chapter 406 of the ULDC and outlined in the Alachua County Environmental Resources Assessment Checklist. The focus of the investigation was to evaluate any changes that have occurred since 2019, and identify any natural resources existing on, and adjacent to the site.

The condition of the property and information obtained from available public datasets were largely unchanged from the results presented in the 2019 Natural Resources Assessment. This effort resulted in the identification of one item requiring consideration related to the potential development of this site: High Aquifer Recharge Areas. An Alachua County, Environmental Resource Assessment checklist is enclosed as Appendix A of this report.

The project site is located within a High Aquifer Recharge Area as defined in Chapter 406, Article 8 (Springs and High Aquifer Recharge Areas) of the ULDC. As such, the developer(s) may be required to comply with the Stormwater Element of the Comprehensive Plan and Chapters 407 (General Development Standards) and 353 (Hazardous Materials) of the ULDC.

PROJECT OVERVIEW

Verde Environmental Co. (Verde) was contracted to update the Natural Resource Assessment we completed in 2019 on Alachua County Parcel 06326-001-000. The undeveloped 25.64-acre parcel is located at 1404 Ft. Clarke Blvd. in Gainesville, FL. This addendum, in conjunction with our 2019 report, is provided to satisfy the requirements of the Alachua County Comprehensive Plan 2002, as amended, Conservation Open Space Element Policy 3.4.1. Specifically, this work is intended to identify natural and historical resources recognized in Chapter 406 of the ULDC and outlined in the Alachua County Environmental Resources Assessment Checklist. These would include, but are not limited to the following: hydrologic conditions, geologic features, historical resources, significant natural communities, and listed species habitat. The focus of this investigation was to document any changes that may have occurred since our investigation in 2019, and to identify and assess the natural resources existing on, and adjacent to the site. This effort would also evaluate the presence and extent of any ecologically significant areas, which may ultimately be designated as a Conservation Management Area.

PROJECT LOCATION

The subject property is situated along the west side of Ft. Clarke Blvd. approximately 2,000 feet north of the intersection of Ft. Clarke Blvd. and Newberry Rd. (SR-26) (Figure 1). The site is bound by Ft. Clarke Blvd to the east, Alachua County Fire Rescue (Station 16) to the north, and the Eagle Point subdivision to the west and south. The surrounding landscape is almost completely developed as residential and commercial land uses.

PREVIOUS ENVIRONMENTAL INVESTIGATION

Verde Environmental previously completed a thorough investigation of potential resources on or adjacent to the subject property, and the results of that effort were presented in our Natural Resource Assessment dated September 2019. That effort resulted in the identification of one item requiring consideration related to the potential development of this site: High Aquifer Recharge Areas. No other natural resources or ecologically significant areas (e.g. wetlands, surface waters, floodplains, significant habitat, listed species, geologic features, etc.) were found onsite in 2019.

METHODOLOGY

The collection of data pertinent to this report included both a desktop review of updated Geographic Information Systems GIS databases and a site reconnaissance field visit to the property. Recently released aerial photographs (2020); U.S. Department of Agriculture, Natural Resources Conservation Service (NRCS) soil maps (2021); U.S. Fish and Wildlife Service, National Wetland Inventory (NWI) maps (2022); and Federal Emergency Management Agency (FEMA) Flood Hazard maps (2021) were reviewed for any revisions affecting the area on or adjacent to the subject property.

An ecological reconnaissance of the subject property was completed on July 20, 2022. Our scientists conducted a thorough survey of the subject property by traversing the property's perimeter and walking meandering belt transects through the interior of the site. One hundred percent of the property was visually inspected during this site visit. Existing conditions both on-site and off-site were identified and described. Observations of wildlife were recorded, including any listed species and their potential habitats. Our scientists also noted any additional natural resources or pertinent

characteristics identified during the site visit. The weather conditions during the field survey were partly to mostly cloudy, 88-94° Fahrenheit, with minimal to light winds between 0 and 5 mph.

RESULTS

The habitats and other resources observed during the field assessment were largely the same as those described in 2019. No surface waters, wetlands, flood plains, significant habitats, listed species, or listed species habitats were observed on or adjacent to the subject property. The type and extent of natural communities described onsite have not changed other than anticipated growth of the existing vegetation.

Review of Geographic Information Systems Data

No changes concerning the subject property were found in updated versions of available GIS datasets or other maps. While the new FEMA Flood Hazard map included minor adjustments to nearby flood zones, the property is still located outside of the 500-year floodplain, and the nearest mapped flood zone is located more than 200 feet offsite to the northeast (Figure 2). All other GIS datasets have remained unchanged from those reviewed in 2019.

Natural Plant Communities and Land use

The onsite and adjacent land use has not changed since 2019. The site is still bound by Ft. Clarke Blvd. and the HarborChase of Gainesville Retirement Community to the east, the Alachua County Fire Rescue Station 16 to the north, and the Eagle Point subdivision to the west and south. There has been no new development around the property, and onsite vegetative communities have not changed.

During the site visit, we classified/verified two different land use types (Upland Coniferous Forests (FLUCCS 4100) and Upland Mixed Coniferous/Hardwoods (FLUCCS 4340)) within the subject property (Figure 3). Species composition was similar to that reported in 2019, although there was an increase in areal cover and height of the understory stratum throughout the site. The increased cover of the understory stratum can be seen in the recent 2020 aerial photograph. The overall condition of these habitats is typical for the surrounding landscape, and the species composition is as expected for vegetative communities surrounded by urban, residential, and commercial land uses. It is Verde's opinion that the existing condition of onsite communities does not represent significant habitat. Each onsite community is discussed in more detail below.

Pine Flatwoods (FLUCCS 4110) - +/-8.97 Acres Onsite

This community was found in the northern third of the property and extending offsite farther to the north. It is characterized by a sparse canopy of mature pines and scattered hardwood trees. A dense shrub stratum has developed due to lack of management and the absence of periodic fires that would typically maintain a more open understory stratum in naturally occurring pine flatwoods communities. Partial harvests of canopy trees in 2011-2012 have also contributed to the dense understory growth. The open canopy stratum was dominated by loblolly pine (*Pinus taeda*) intermixed with a scattering of laurel oak (*Quercus laurifolia*), water oak (*Quercus nigra*), southern red oak (*Quercus falcata*), southern magnolia (*Magnolia grandiflora*), sugarberry (*Celtis laevigata*), sweetgum (*Liquidambar styraciflua*), longleaf pine (*Pinus palustris*), and tung oil tree (*Vernicia fordii*). Some smaller diameter trees (diameter at breast height (dbh) less than 6 inches) have recruited into the canopy, but most canopy trees had a diameter at breast height (dbh) of 12-20 inches. The larger trees were likely those left standing during the past timber harvest, possibly as a shelterwood or seed

tree cutting strategy. The dense understory stratum was dominated by canopy tree saplings as well as winged sumac (*Rhus copallinum*), camphor tree (*Cinnamomum camphora*), black cherry (*Prunus serotina*), Carolina laurel cherry (*Prunus caroliniana*), devil's walking stick (*Aralia spinosa*), and tree of heaven (*Ailanthus altissima*). These shrubs and tree saplings were often cover by a dense blanket of various vines including: grape vine (*Vitis* sp.), green briar (*Smilax* sp.), yellow jessamine (*Gelsemium sempervirens*), pepper vine (*Nekemias arborea*), Virginia creeper (*Parthenocissus quinquefolia*), and trumpet creeper (*Campsis radicans*). Due to the dense understory and vine cover, there was very little groundcover vegetation. When present, the groundcover consisted of beggar ticks (*Bidens alba*), blackberry (*Rubus* sp.), goldenrod (*Solidago* sp.), poison ivy (*Toxicodendron radicans*), American beautyberry (*Callicarpa americana*), ebony spleenwort (*Asplenium platyneuron*), and basket grass (*Oplismenus setarius*).

Upland Mixed Coniferous/Hardwoods (FLUCCS 4340) - +/-16.67 Acres Onsite

This land use was observed over the southern two-thirds of the property and was formerly a tree nursery that specialized in field-grown ball and burlap trees as well as some container grown ornamental shrubs. The existing canopy predominantly consisted of various trees grown in rows as part of the nursery operations. Large pots, irrigation hoses, and soil separation fabric were also frequently encountered throughout this habitat, and several dense stands of ornamental shrubs have established in areas where pots and containerized plants were discarded. While the canopy was closed (75-85 percent closure) near the property boundary, the majority of the habitat consisted of an open canopy (15-40 percent closure) dominated by laurel oak, live oak (*Quercus virginiana*), loblolly pine, black cherry, sweetgum, sugar berry, and Chinese tallow tree (*Triadica sebifera*). Most canopy trees ranged in size from 6 to 18 inches dbh. The moderately dense understory stratum consisted of canopy tree saplings as well as camphor tree, winged sumac, crape myrtle (*Lagerstroemia indica*), southern magnolia, hickory (*Carya* sp.), red maple (*Acer rubrum*), common persimmon (*Diospyros virginiana*), silk tree (*Albizia julibrissin*), red cedar (*Juniper virginiana*), white ash (*Fraxinus americana*), elm cultivars (*Ulmus* sp.), and groundsel tree (*Baccharis halimifolia*). The dense groundcover stratum was dominated by goldenrod, beggar tick, Johnson grass (*Sorghum halepense*), blackberry, bluestem (*Andropogon* sp.), showy rattlebox (*Crotalaria spectabilis*), hairy indigo (*Indigofera hirsuta*), yellow jessamine, poison ivy, green briar, grape vine, ebony spleenwort, cogon grass (*Imperata cylindrica*), beggar lice (*Desmodium* sp.), flat sedge (*Cyperus* sp.), ragweed, (*Ambrosia artemisiifolia*), skunk vine (*Paederia foetida*), cypress vine (*Ipomoea quamoclit*), Virginia creeper, pepper vine, and American beautyberry.

Listed Species/Listed Species Habitats (FNAI S1–S3; State or Federally E, T, SSC)

No listed species or their preferred habitats were observed during the field site visit. As part of this effort, Verde also reviewed an updated Florida Natural Areas Inventory (FNAI) Biodiversity Matrix Query for the 1-mile square matrix unity including the subject property. This recent query returned the same potential elements as those returned past queries. As was described in our 2019 report, it is unlikely that any listed species would utilize the property due to a general lack of preferred habitat both onsite and in the surrounding landscape.

Although the gopher tortoise (*Gopherus polyphemus*) is often found on sites with well drained soils and abundant groundcover vegetation, as was observed within the Upland Mixed Coniferous/Hardwood community discussed above, no tortoise burrows were found onsite during thorough investigations both now in 2022 and previously in 2019. Furthermore, due to adjacent land

uses and land cover, it is unlikely that tortoises would be found within the surrounding landscape, and it is unlikely that tortoises would ever colonize the subject property.

High Aquifer Recharge Areas

As was reported in 2019, the site is located within a High Aquifer Recharge Area. Based on data provided by Alachua County, the Floridan aquifer is unconfined at this location. However, no site-specific soil boring information was obtained for this effort.

Wells

As was reported in 2019, Verde scientists observed one private water supply well on the subject property (Figure 3). The well was likely used to provide irrigation for the plant/tree nursery operation. It appeared that the pump was still in the well, but the well pressure tank had been removed. We did not investigate the pumps power supply or if the downstream irrigation piping was still intact.

DISCUSSION AND CONCLUSIONS

No new resources were identified as a result of this effort. The condition of habitats found onsite and the information collected from available datasets were largely unchanged from the results presented in the 2019 Natural Resources Assessment. Although the areal cover of the understory stratum increased compared to three years ago, vegetative composition and the quality of onsite habitats remained the same. In general, the property provides poor quality habitat for local wildlife, and no listed species, or their preferred habitats, were found onsite. No applicable changes were found in available GIS datasets. Minor adjustments were seen in the surrounding FEMA Flood Hazard maps, but the adjustments had no effect on the subject property. The site is still located outside of the 500-year floodplain and no flood zones were mapped within 200 feet of the subject property.

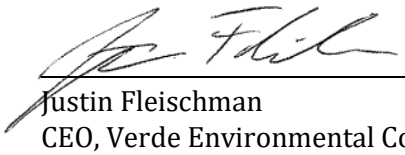
As was reported in 2019, this effort resulted in the identification of one item requiring consideration related to the potential development of this site: High Aquifer Recharge Areas.

High Aquifer Recharge Area

In accordance with Chapter 406, Article 8 (Springs and High Aquifer Recharge Areas) of the ULDC, the subject property is located within a high aquifer recharge area and may require the developer(s) to comply with the Stormwater Element of the Comprehensive Plan and Chapters 407 (General Development Standards) and 353 (Hazardous Materials) of the ULDC.

SIGNATURES AND QUALIFICATIONS

I, Justin Fleischman, declare that, to the best of my professional knowledge and belief, I am qualified to complete this Natural Resource Assessment. I coordinated and supervised the data collection and regulatory review necessary to complete this assessment. I believe all the information provided above to be true as of the date of the site reconnaissance visits and the date of this report.



July 29, 2022

Justin Fleischman
CEO, Verde Environmental Co.
Principal Environmental Scientist

Date

Mr. Justin Fleischman, CEO of Verde Environmental Co., has over 15 years of professional experience managing and reviewing environmental projects. He specializes in environmental permitting, wetland assessment and mitigation, listed species surveys, habitat restoration, ecohydrology, environmental monitoring, stormwater management (NPDES), environmental audits (including compliance and transactional), and project management. Mr Fleischman holds an M.S. in Ecological Engineering/Systems Ecology from the University of Florida and a B.S. in Ecosystem Restoration and Management from the University of Wisconsin – Stevens Point.

Additional Personnel

Mr. Scott Blanford, COO of Verde Environmental Co. assisted and was under the responsible charge of Mr. Justin Fleischman for this Natural Resource Assessment. Mr. Blanford conducted supplemental data review and mapping of historical aerial imagery under the supervision of Mr. Fleischman in accordance with practice standards. Mr. Blanford holds a B.S. in Natural Resource Management from the University of Florida, and over 15 years of experience in the environmental consulting industry.

ENVIRONMENTAL RESOURCES ASSESSMENT CHECKLIST

Pursuant to Alachua County Comprehensive Plan 2002, as amended, Conservation Open Space Element Policy 3.4.1, applications for land use change, zoning change, and development approval shall be required to submit an inventory of natural resource information. The inventory shall include site specific identification, analysis and mapping of each resource present on or adjacent to the site. The identification and analysis shall indicate information sources consulted.

Natural Resources Checklist:

Check "Yes" for each resource or resource characteristic identified and discuss and provide supporting material.
Check "N/A" for each resource or resource characteristic not present or otherwise relevant to the application.

Yes	☐	N/A	☑	Surface Waters (ponds, lakes, streams, springs, etc.)
Yes	☐	N/A	☑	Wetlands
Yes	☐	N/A	☑	Surface Water or Wetland Buffers
Yes	☐	N/A	☑	Floodplains (100-year)

OPEN SPACE MANAGEMENT PLAN
for
Lullwater @ Ft. Clarke TND
(12-05-2022)

I. INTRODUCTION

The Lullwater @ Ft. Clarke TND is a Traditional Neighborhood Development with a minimum of 10% open space set aside. The open space will be managed by the developer's property management entity, which has not yet been established, for the use and enjoyment of the residents. As part of the Alachua County site plan approval process and subject to the proposed Comprehensive plan, the development plan is required to delineate 10% of the property area for use as designated Open Space. This requirement is outlined in Chapter 407, Article V of the Alachua County Unified Land Development Code (ULDC). The Open Space delineated for the property is in one main area on the property. This area will be specifically identified as Open Space Area 1, as shown on the Open Space Plan included as **Attachment A**.

The proposed open space area is provided as "Non-Conservation Open Space" The proposed open space is 2.58 acres or 10.08% of the site. This Open Space Management Plan is provided per the requirement of the Alachua County Unified Land Development Code (ULDC), Chapter 407, Article V. This management plan aims to create a natural, habitat-sensitive, and safely maintained open space area.

Based on visual observation by the project environmental consultant, Verde Environmental Co., in September 2019 and July 2022, there were no listed species or listed species habitats identified on site.

II. MAINTENANCE ENTITY

The property management entity will be responsible for the management of the property open space. The management entity may contract with separate parties in order to provide the necessary maintenance services established in this plan.

III. OPEN SPACE CATEGORIES

Non-Conservation Open Space

Open Space Area 1 is designated per the ULDC as "Non-Conservation Open Space" and will contain natural forested areas being set aside as a natural amenity for the property. These Open Spaces will be provided as landscape buffer areas and passive recreational areas used for walking, wildlife viewing, picnicking, and other passive recreational functions. These areas will be used in a passive manner and will be managed to maintain the natural landscape, plant and wildlife habitat.

IV. OPEN SPACE AREA MANAGEMENT OBJECTIVES

Non-Conservation Open Space

1. The Non-Conservation Open Space within the development is meant to be used primarily for landscape buffering, walking, wildlife viewing, picnicking, and other passive recreational functions. The open space area shall be managed to allow the Non-Conservation Open Space to maintain its natural function.
2. Existing trees and shrubs in this area shall only be pruned and maintained to reflect their natural shape and promote growth. The trimming of lower limbs shall be discouraged and limited to that necessary for public safety. Any new plantings or landscaping shall be native vegetation introduced to complement the natural landscape or replace dead or dying vegetation.
3. Permanent irrigation is not proposed within the Non-Conservation Open Space. Temporary irrigation may be used to establish new plantings.
4. The natural areas may be periodically treated for weeds or pests if a persistent problem is identified that is causing decline of the natural system. The parties performing maintenance shall adhere to all federal, state, and local regulations regarding pesticide and herbicide management.
5. Nature trails are permitted in the Non-Conservation Open Space and will be surfaced and maintained in compliance with the ULDC and proposed Comprehensive Plan in order to allow for an accurately marked trail. Maintenance of these areas shall be performed to mitigate negative impact to the natural habitat within the open space.
6. The proposed open space shall remain open and accessible to the neighborhood residents and their guests. Access may be limited to specifically designated entry locations but shall remain open and accessible at all times.
7. Maintenance shall include the removal of vegetation which is dead or dying due to disease or natural disaster or vegetation determined to be a hazard to public safety.
8. The property management entity is responsible for long-term maintenance of the Non-Conservation Open Space and may utilize a contract with a landscaping or separate management company to provide routine maintenance.
9. In the event a sinkhole or other geological feature develops, the owner shall contract with a civil engineering or geotechnical engineering consulting firm to direct the owner to an appropriate remediation construction technique to plug or stabilize the feature and prevent groundwater contamination. The remediation construction techniques shall follow generally accepted methodologies for karst feature repairs as outlined by the Alachua County ULDC and the St. John’s River Water Management District (SJRWMD).

OPEN SPACE NOTES

1. THERE IS NO CONSERVATION OR NATURAL AREA PRESENT WITHIN THE LIMITS OF THE PROPOSED PROJECT THAT WOULD QUALIFY AS PRIMARY OPEN SPACE.
2. THE PROPOSED OPEN SPACE CONSISTS OF 2.58 AC. OF PROPERTY, WHICH IS COMPRISED OF NATURAL WOODED AREA "COMMUNITY GREEN SPACE". THE AREA IS ON THE SITE PERIMETER AND CONTIGUOUS.
3. A NATURAL RESOURCE ASSESSMENT WAS PERFORMED BY ECOSYSTEM RESEARCH CORPORATION IN JUNE 2021. THE FOLLOWING OBSERVATIONS WERE MADE:
   a. SURFACE WATERS: ONE SURFACE WATER BOUNDARY EXIST WITHIN OR ADJACENT TO THE PROJECT AREA.
   b. WETLANDS: NO WETLANDS ARE WITHIN OR ADJACENT TO THE PROJECT AREA.
   c. FLOODPLAINS (100-YEAR): NO FLOODPLAIN EXISTS ON OR ADJACENT TO THE SITE.
   d. LISTED SPECIES: NO LISTED SPECIES WERE OBSERVED ONSITE DURING THE ENVIRONMENTAL ASSESSMENT.
   e. STRATEGIC ECOSYSTEMS: THE SITE IS NOT WITHIN OR ADJACENT TO A STRATEGIC ECOSYSTEM.
   f. SIGNIFICANT GEOLOGICAL FEATURES: ONE SIGNIFICANT GEOLOGICAL FEATURE WAS OBSERVED ON OR ADJACENT TO THE SITE. THE EXISTING SINK HOLE IS PROTECTED BY A PROPOSED 60FT BUFFER.
   g. HIGH AQUIFER RECHARGE AREA: THIS SITE IS LOCATED WITHIN A HIGH AQUIFER RECHARGE AREA.
5. TREE CANOPY RETENTION CALCULATIONS WERE PERFORMED PER ULDC SECTION 406.12 g) 3.4.5 (a-k) UTILIZING A GOOGLE EARTH AERIAL DATED 2019 AND A SITE VISIT. THE EXISTING TREE CANOPY IS DELINEATED ON THE TREE CANOPY PLAN – SHEET C3.1.

Countywide Stormwater Code Affidavit of Compliance.

Instructions: Complete and submit this form for all activities that involve the construction of a stormwater management system. Please submit this form, along with the other required documents as listed in Sec. 77.28 of the Alachua County Code.

Part 1. Applicant Information

Applicant or Owner Name: Phone Number:
Company Name: Email Address:
Company Address: 3530 NW 43rd St, Gainesville, FL 32606

Registered Professional Name: Phone Number:
Company Name: Email Address:
Company Address: 3530 NW 43rd St, Gainesville, FL 32606

Part 2. Project Location Information

Project Name: Tax Parcel:
Project Location (Unincorporated Alachua County or Municipality): 1404 Ft. Clarke Blvd, Gainesville, FL 32606

Note: For projects located in Municipalities submittal of this form is a self-certification of compliance. An acknowledgement of receipt will be sent once all required documents are provided. This acknowledgement is not a review of the submitted materials. Projects in Unincorporated Alachua County will be reviewed pursuant to Sec. 77.27 of the Alachua County Code.

Part 3. Stormwater Discharge Information

Watershed Name:
Waterbody ID Number (WBID#):

Stormwater Discharge Locations Please Check all That Apply
❑ Project Discharges Offsite as Surface Flow
❑ Project Discharges Directly to Outstanding Florida Water
❑ Project is in the Watershed of a Waterbody Listed as Impaired for Nutrients or has a Nutrient TMDL
❑ Project Infiltrates to Groundwater
❑ Project is in the Sensitive Karst Area

Please briefly describe the Best Management Practices used:

Part 4. Exemption and Waiver Information

If applicable, Please list the exemption(s) this project qualifies for under Sec. 77.25 of the Alachua County Code. Supporting Documentation may be required:

If applicable, Please describe the waiver you are requesting under Sec. 77.26 of the Alachua County Code. Supporting documentation is required:

Part 5. Signatures

I authorize Alachua County, and its agents and contractors, to enter the property for the purpose of verifying compliance. If the property is sold and/or the entity responsible for operation and maintenance of the stormwater management system, the Property Owner will notify the Alachua County Environmental Protection Department within 30 calendar days of the sale or change in operation and maintenance entity. Failure to comply may result in enforcement action using the provisions of Alachua County Code Chapter 24 or any other remedy available by law or equity.

Applicant/Owner Signature: Logan Peters Date:

I hereby certify that the above referenced project meets, or is exempt from, the requirements of the Alachua County Code Chapter 77, Article III Stormwater Treatment Code. I further certify that the Operation and Maintenance requirements have been provided to the owner and entity responsible for operation and maintenance of the stormwater management system.

I. Introduction

The proposed development is a TND with approximately 299 multi-family units and 24,900 SF of non-residential development located on 25.6 acres called Lullwater. This development will be designed and permitted in a single phase with one master drainage plan. This report will address the stormwater management facilities associated with the entire build out of Lullwater. The site is located off the West Side of Ft. Clarke Blvd, North of the intersection of Ft. Clarke Blvd and W Newberry Road as shown on **Attachment A**. The property does not contain any jurisdictional wetlands and the majority of the site is comprised of open fields in good conditions. There are (3) total post-development drainage areas containing the proposed development area as well as future development and offsite area. The drainage areas are listed below.

Post DA-1	=	10.98 AC
Post DA-2	=	9.84 AC
Post DA-Offsite	=	1.37 AC

The proposed improvements to serve the development include paved streets, sidewalks, and underground utilities. Each onsite drainage area will be served by its own stormwater basin. Runoff will reach the stormwater basins via sheet flow, drainage swales, inlets and storm sewer piping. The onsite stormwater basins are designed as detention systems with discharge to the Alachua County Right-of-Way east of the development. The offsite stormwater depressions are designed to reduce the max flood stages from the Pre-Development condition.

II. Drainage Design Criteria

A. Alachua County

Stormwater management facilities must be designed in accordance with the following:

Stormwater Quantity: All developments that discharge to a stream or open lake basin shall be constructed and maintained so that post-development runoff rates and pollutant loads do no exceed pre-development conditions. For projects that have no positive outfall, the stormwater management system shall be designed to retain the total volume of stormwater runoff for the contributing watershed for the 100-year critical duration storm event.

Stormwater Quality: Water quality treatment volumes for retention basins must be recovered within 72 hours following the end of the storm event, assuming average antecedent moisture conditions. For open lake and closed lake dry basins, total retention/detention volumes for storm events up to the 100-year, 24-hour, storm event, must be recovered within 14 days, following the end of the storm event, assuming average antecedent moisture conditions. For dry basins with no outfall, the above criteria for recovery shall apply or sufficient retention volume shall be provided above the stage of recovery at the end of 14 days for a subsequent 100-year, 24-hour storm event. Additionally, all stormwater management systems must be designed to treat 0.5 inches or runoff or 1.25 inches times the impervious area, whichever is greater, plus 0.5 inches additional treatment volume.

B. Saint John's River Water Management District (SJRWMD)

Stormwater management facilities must be designed in accordance with the Saint Johns River Water Management District Applicant's Handbook Volume II as follows:

Stormwater Quantity: Dry retention, on-line systems must meet the peak discharge requirement for the following 24-hour, and 96-hour duration design storm events, while providing six inches of freeboard:

- Mean annual storm (2.3-year return period) with a total 24-hour rainfall depth of 4.5 inches.
- 25-Year return period.

In addition, St. Johns requires the stored volume to be completely recovered within 14 days following the end of the critical storm event.

Stormwater Quality: Dry retention On-line stormwater ponds must provide retention of the first one-half inch of runoff over the drainage area or 1.25 inches of runoff from the impervious area, whichever is greater, plus an additional one-half inch of runoff over the drainage area.

C. National Pollutant Discharge Elimination System (NPDES)

Chapter 62-621.300(4) FAC requires that a Stormwater Pollution Prevention Plan (SWPPP) must be developed for issuance of a Generic Permit for Stormwater Discharge from Large and Small Construction Activities in order to be in conformance with the Florida Department of Environmental Protection (FDEP) regulation of point source discharges of stormwater from construction sites, as defined by the NPDES.

As outlined under the above mentioned rule, FDEP requires construction Activities spanning one (1) acre or more to comply with the regulations that limit point source discharge of stormwater runoff from the construction site. A Notice of Intent (NOI) must be submitted to FDEP prior to construction. The SWPPP must be included within the plan set to demonstrate the means by which the guidelines of the NPDES will be met. The project drawing set includes an SWPPP for the project, and the contractor will file for the NOI prior to beginning construction activities.

D. Rainfall Data (All Agencies)

The rainfall amounts that were used in this report came from a combination of data sources, such as the FDOT IDF Curves, SRWMD Applicant's Handbook Vol. II, and the NOAA ATLAS 14 Point Precipitation Curves. Table 1 identifies where each of the rainfall amounts were derived from. The worst case rainfall amount for each storm was used during design.

Table 1: Rainfall Amounts

Duration (Hours)	Depth of Rainfall		
	Mean Annual	25 Year	100 Year
1	N/A	N/A	4.40
2	N/A	N/A	5.40
4	N/A	N/A	6.60
8	N/A	N/A	7.84
24	4.20	7.38	9.97
72	N/A	N/A	13.10
96	N/A	11.40	N/A
168	N/A	N/A	14.70
240	N/A	N/A	15.50

* Rainfall Data from FDOT IDF Curves
* Rainfall Data from Saint John's River Water Management District
* Rainfall Data from NOAA ATLAS 14 Point Precipitation Curves for Zone 5

III. Design Methodology

The proposed stormwater management system was analyzed using the computer model ICPR V3.2, which uses the SCS Curve Number and Unit Hydrograph Method. The ICPR modeling program was used to analyze the effects of the 100-year, critical duration storm events on the Post-Development drainage system and the unsaturated recovery analysis of the on-site exfiltration basin system.

The FDOT rainfall distribution was used to analyze all storms including the 100-year 1-, 2-, 4-, 8-, 24-, 72-, 168- and 240-hour storms, the 25 year 24 HR and 96 HR storms, and the mean annual storm.

For this analysis, a hydrograph peaking factor of UH484 was used, which is representative of areas with large impervious areas and significant drainage works. The SCS curve numbers were chosen as a function of soil type, land-use and hydrologic conditions. The time of concentration represents the time for a drop of water to travel from the farthest most hydrological connected point to the basin (node).

IV. Geotechnical Investigation

GSE Engineering & Consulting, Inc. (GSE) performed the geotechnical engineering investigation for the proposed stormwater basin systems. A copy of the "Geotechnical Engineering Report" is provided as **Attachment B**. A summary of the recommended soil parameters for stormwater management design analysis are listed in Table 2. The vertical and horizontal infiltration rates utilized by JBPro incorporate a design safety factor of 2. The data in the table below for Basin 1 corresponds to "Stormwater Basin 1" in the geotechnical report, and Basins 2 correspond to "Stormwater Basin 2" in the geotechnical report. Refer to **Attachment B** for the distribution of soil classifications within the proposed site.

Table 2: Soil Parameters

Soil Parameter	Basin 1	Basin 2
Unsaturated Vertical Infiltration Rate	5 ft / day	4 ft / day
Horizontal Hydraulic Conductivity Rate	7.5 ft / day	6 ft / day
Specific Yield	25%	20%
Elevation of Effective Aquifer	100.5 FT	108.5 FT
Average Seasonal High Water Elevation	101 FT	109 FT
Design Vertical Infiltration Rate	2.5 ft / day	2 ft / day
Design Horizontal Hydraulic Conductivity Rate	3.75 ft / day	3 ft / day

V. Pre-Development Drainage Design

A. Stormwater Management Design

As shown on the Pre-Development Drainage Map (**Attachment C**) and Pre-Development Drainage Calculations (**Attachment D**), there are no onsite depressions to collect the Pre-Development stormwater runoff. The entire site is home to a local high point that facilitates drainage off to neighboring properties. There is only one pre-development drainage area located on site.

The FDOT rainfall distribution was used to analyze the Mean Annual and 25 year storms. The full input report from ICPR can be seen in **Attachment E**.

B. Drainage Area Curve Numbers

As shown in **Attachment C**, the Pre-Development analysis is broken down into (1) Drainage Area. Table 3 provides the Pre-Development Drainage Area Curve Numbers for the drainage area. Full calculations for the curve number below can be seen in **Attachment D**.

Table 3: Pre-Development Design Data

Design Parameter	Pre DA-1
Total Drainage Area (Acres)	16.24
Weighted Curve Number (CN)	43

C. Flood Routing – Volume/Rate

The system was analyzed under pre-development conditions using the stormwater modeling program ICPR 3.2 to perform the stormwater flood routings to establish the pre-development flood stages. Total flow and max flow rate offsite were also analyzed as discharge to neighboring properties. The program uses the runoff conditions and the basin design parameters to route the required design storm events. In addition, PercPak within ICPR utilizes the existing geotechnical parameters for the stormwater analysis as part of the mounding modeling analysis to analyze recovery of the system. ICPR with PercPak is an accepted analysis program by the regulatory agencies having jurisdiction. ICPR input data and modeling results are provided in the output reports included in **Attachment F**.

There were no onsite depressions to establish critical elevations for each storm event, instead the area was modeled for volume/rate control. A summary from ICPR of the runoff for the drainage area can be seen in **Attachment F.**

VI. Post-Development Drainage Design

A. Stormwater Management Design

As shown on the Post-Development Drainage Map (**Attachment G**) and calculations (**Attachment H**), two basins are proposed to handle the post-development stormwater. Stormwater runoff from the proposed development will enter the system via stormwater curb, surface inlets, and sheet flow. The FDOT rainfall distribution was used to analyze the 100-year 1-, 2-, 4-, 8-, 24-, 72-, 168- and 240-hour storms, the 25 year 96 HR storm, and the mean annual storm. The full input report from ICPR can be seen in **Attachment I**.
The Pre-Development drainage area was altered for the Post-Development design. The Post-Development design consists of three (3) drainage areas: two (2) large drainage areas Post DA-1 and Post DA-2, and an offsite drainage area. Post DA-1 is located on the North side and Post DA-2 is located on the South side. Both have their own stormwater basin that stormwater runoff will be conveyed to, which will be discharged to the Alachua County Right-of-Way through Basin 1. The offsite drainage area is located along the Eastern property line.

Basin 2 located in Post DA-2 is also designed to serve as the "Pre-Treatment" Basin for the entire stormwater system, before staging and discharging through a control structure into Basin 1. Calculations for the pre-treatment volume can be seen in **Attachment H.**

B. Drainage Area Curve Numbers

Attachment G shows the Post-Development analysis broken down into three (3) drainage areas, two (2) that serve onsite runoff and one (1) that serves offsite runoff. Table 4 provides the Post-Development Drainage Area Curve Numbers for each drainage area. Full calculations of the curve numbers below can be seen in **Attachment H.** The drainage areas were broken down into several categories, such as open space, building area, impervious area, and retention area. Curve numbers were assigned to each category based on the data presented in TR-55, which is an accepted report for curve numbers.

Table 4: Post-Development Design Data

Design Parameter	Total Drainage Area (AC)	Weighted Curve Number (CN)
DA – Basin 1	10.98	84
DA – Basin 2	9.84	85
DA - Offsite	1.37	40

C. Basin Stage – Storage Relationship

The calculations for the proposed stormwater detention basins are provided in **Attachment H**. Basins 1 and 2 are designed to retain enough stormwater runoff such that Pre-Development discharge conditions are not exceeded. The stage/volume/storage calculations for the basin system are shown in **Attachment G** and in Tables 5A & 5B.

Table 5A: Post DA-Basin 1 Depression Stage/Storage

Stage (FT)	Storage Volume (CF)	Storage Volume (AC-FT)
111.00	0.00	0.00
112.00	90,693.88	2.08
113.00	188,448.21	4.33
114.00	293,363.52	6.73
115.00	405,540.35	9.31

Table 5B: Post DA-Basin 2 Depression Stage/Storage

Stage (FT)	Storage Volume (CF)	Storage Volume (AC-FT)
117.25	0.00	0.00
118	30,910.45	0.71
119	75,452.51	1.73
120	123,886.09	2.84

D. Water Quality Treatment Volume

St. John's River Water Management District criteria governs the water quality treatment volume recovery requirements for this project. These criteria require the WQTV to be the runoff from the first half inch of rainfall over the drainage area or 1.25 inches over the impervious area, whichever is greater, plus an additional half inch over the drainage area. For this project, 1.25 inches over the impervious area will be used in addition to the half inch over the entire drainage area. The total WQTV for each drainage area in the project is calculated below, followed by a breakdown on how much WQTV is held within each basin. The SJRWMD requires that the required Water Quality Treatment Volume (WQTV) be recovered within 72 hours following the design storm event. In accordance with SJRWMD recommendations, the water quality treatment volume was routed using ICPR as a slug load to determine the WQTV recovery time. Table 6 shows the routing recovery time after the slug load was applied. The full calculations for WQTV recovery are provided in **Attachment H.**

Total WQTV Required = (1.25 IN) * (1 FT / 12 IN) * (549,141 SF Impervious Area) +
(0.5 IN) * (1 FT / 12 IN) * (906,991 SF Drainage Area)

Total WQTV Required = 94,993 CF

Table 6: Water Quality Treatment Volume Storage

Basin Name	Stored Volume Stage (FT)	Stored Volume (CF)	Recovery Time (HRS)
Basin 1	111.75	67,363	4.51
Basin 2	118.25	41,694	8.51
	Total:	**109,057 CF**	

The minimum WQTV can be contained and treated within the (2) onsite stormwater basins. The elevations of stored water in each of the basins can be seen in Table 6 above. With a maximum recovery time of 8.5 hours, each of the (2) two stormwater basins are able to recover the WQTV in less than 72 hours, as required by SJRWMD.

E. Flood Routing – Max Stage

The stormwater system was analyzed using ICPR 3.2 to perform basin flood routings to ensure the retention basins are adequately sized to handle stormwater discharge from all design storm events. The program uses the runoff conditions and the basin design parameters to route the required design storm events. The program is used to determine the peak flood stages to determine the critical storm event, which is the controlling storm event that dictates the final basin design. In addition, PercPak within ICPR utilizes the existing geotechnical parameters for the stormwater basins as part of the mounding modeling analysis to analyze recovery of the system. ICPR with PercPak is an accepted analysis program by the regulatory agencies having jurisdiction. ICPR input data and modeling results are provided in the output reports included in **Attachment J.**

Both of the two (2) stormwater basins created in Post-Development were analyzed to establish the maximum stages for each stage of each storm event. A full summary of the max stage for each basin under all the required storm events can be seen in **Attachment J**. A brief summary of the 25-year critical floodplain elevations can be seen in Table 7 below.

Table 7: Critical Storm Events

Basin Name	Critical Storm Event	Basin Max Stage	Basin Top Elevation
Basin 1	100YR – 168HR	114.70	115.00*
Basin 2	25YR – 096HR	119.75	120.00*

*Additional grading with the inclusion of the 8’ wide maintenance path for each basin provides the missing 3” of freeboard.

F. Flood Routing – Volume Recovery

As required by SJRWMD, the recovery results for each storm event can be seen in **Attachment J**. Basins 1 and 2 fully recover the maximum storage volume within 14 days after the storm events.

VII. Pre-/ Post-Development Comparisons

Per SJRWMD criteria, Post-Development discharge conditions shall not exceed Pre-Development discharge conditions. Maximum discharge rates and volumes into Alachua Counties Right-of-Way do not exceed the pre-development conditions, comparisons of the onsite pre-development and post-development conditions can be seen in Table 8 below.

Table 8: Volume Rate Control Summary

	Alachua County R/W			
Storm Event	Pre-Peak Discharge Volume (CF)	Pre-Peak Discharge Rate (CFS)	Post-Peak Discharge Volume (CF)	Post-Peak Discharge Rate (CFS)
100-YR, 1-HR	0.276	3.75	0.02	0.15
100-YR, 2-HR	0.638	5.46	0.11	0.27
100-YR, 4-HR	1.214	9.23	0.27	0.38
100-YR, 8-HR	1.974	9.37	0.49	0.42
100-YR, 24-HR	3.521	4.20	1.67	0.42
100-YR, 72-HR	6.224	6.37	4.79	0.94
100-YR, 168-HR	7.751	4.97	6.86	3.48
100-YR, 240-HR	8.550	5.76	7.71	1.25
25-YR, 24-HR	1.681	2.10	0.09	0.16
25-YR, 96-HR	4.704	21.13	2.97	0.43
MA, 24-HR	0.219	0.32	0.00	0.00

VIII. Conclusions

The Lullwater Ft. Clarke Blvd. Apartment Complex stormwater system conforms to all of the requirements of SJRWMD, Alachua County, and NPDES. As shown within this report, each of the (2) onsite basins are designed as detention basins and provide the minimum 6” of freeboard. Additionally, each of the onsite basins demonstrates the ability to recover from each storm event within the required times. Based on the data provided in this report, this project complies with the required stormwater management design and permitting requirements for all applicable agencies.

Subject: Summary Report of a Supplemental Geotechnical Site Exploration – Revision 1
Lullwater at Fort Clarke
Gainesville, Alachua County, Florida
GSE Project No. 14185A

GSE Engineering & Consulting, Inc. (GSE) is pleased to submit this revised geotechnical site exploration report for the above referenced project.

Presented herein are the findings and conclusions of our exploration, including the geotechnical parameters and recommendations to assist with building foundation and stormwater management designs. This revision includes reviewing the new site plan with provided building loads.

GSE appreciates this opportunity to have assisted you on this project. If you have any questions or comments concerning this report, please contact us.

Sincerely,

GSE Engineering & Consulting, Inc.

1.0 INTRODUCTION

1.1 General

GSE Engineering & Consulting, Inc. (GSE) has completed this geotechnical exploration for the proposed Lullwater at Fort Clarke located in Gainesville, Alachua County, Florida. This exploration was performed in accordance with GSE Proposal No. 2019-734A-1 dated January 23, 2020. Mr. Ross Rabun, Director of Multi-Family Development, of Fickling and Company, Inc. authorized our services on January 24, 2020. This revision incorporates the new site layout and provided loading conditions along with soil parameters for retaining walls as requested.

1.2 Project Description

We understand that you are planning to develop this property for multi-family residential use. You previously provided a Concept Plan dated July 2, 2019 with the locations of buildings, parking, and stormwater management facilities. You previously requested we provide a proposal for a preliminary site evaluation which included one boring per building along with a few borings for preliminary stormwater management. GSE previously completed a field exploration and issued a *Summary Report of a Preliminary Geotechnical Site Exploration* (GSE Project No. 14185) dated August 29, 2019 and a *Summary Report of a Supplemental Geotechnical Site Exploration* (GSE Project No. 14185A) dated February 24, 2020. Please refer to these reports for additional background information.

This report revision incorporates the latest site plan dated September 23, 2022. Structural loads for the 4- and 5-story buildings were provided via email on October 20, 2022. We understand loads for the 4-story conditions range from 2.2 kips per linear foot (klf) to 4.5 klf, and the exterior turndowns range from 1.5 klf to 3.3 klf. Loads for the 5-story conditions range from 2.9 klf to 6.0 klf, and the exterior turndowns range from 1.9 klf to 4.4 klf. Additional borings have not been performed based on the new layout. The recommendations are provided based on the revised building loads and the borings performed to date. Some of the new building locations do not have the minimum number of SPT borings performed within the building footprint that was originally requested. GSE can provide a proposal for a subsurface exploration at these locations at your request.

1.3 Purpose

The purpose of this geotechnical exploration was to determine the general subsurface conditions, evaluate these conditions with respect to the proposed construction, and prepare geotechnical parameters and recommendations to assist with building foundation and stormwater management designs.

2.0 FIELD AND LABORATORY TESTS

2.1 General Description

The procedures used for field sampling and testing are in general accordance with industry standards of care and established geotechnical engineering practices for this geographic region. The preliminary investigation consisted of performing twenty-eight (28) Standard Penetration Test (SPT) borings to depths of 20 feet below land surface (bls) within the proposed building areas and eight (8) auger borings to depths of 15 feet bls within the proposed stormwater management facilities. The supplemental exploration consisted of performing twenty-one (21) SPT borings to depths of 20 feet below land surface (bls) within the proposed building locations and twenty-nine (29) auger borings to depths of 15 feet bls within the proposed stormwater management facilities.

The soil borings were performed at the approximate locations as shown on Figure 2. The borings were located at the site using the provided site plan at the time of the exploration and obvious site features as reference. The boring locations should be considered approximate. The preliminary soil borings were performed from August 9 through 14, 2019. The supplemental soil borings were performed from February 3 through 11, 2020.

2.2 Auger Borings

The auger borings were performed in accordance with ASTM D1452. The borings were performed with flight auger equipment that was rotated into the ground in a manner that reduces soil disturbance. After penetrating to the required depth, the auger was retracted and the soils collected on the auger flights were field classified and placed in sealed containers. Representative samples of each stratum were retained from the auger boring. Results from the auger borings are provided in Section 5.1.

2.3 Standard Penetration Test Borings

The soil borings were performed with a drill rig employing mud rotary drilling techniques and Standard Penetration Testing (SPT) in accordance with ASTM D1586. The SPTs were performed continuously to 10 feet and at 5-foot intervals thereafter. Soil samples were obtained at the depths where the SPTs were performed. The soil samples were classified in the field, placed in sealed containers, and returned to our laboratory for further evaluation.

After drilling to the sampling depth and flushing the borehole, the standard two-inch O.D. split-barrel sampler was seated by driving it 6 inches into the undisturbed soil. Then the sampler was driven an additional 12 inches by blows of a 140-pound hammer falling 30 inches. The number of blows required to produce the next 12 inches of penetration were recorded as the penetration resistance (N-value). These values and the complete SPT boring logs are provided in Section 5.2.

Upon completion of the sampling, the boreholes were abandoned in accordance with Water Management District guidelines.

2.4 Soil Laboratory Tests

The soil samples recovered from the soil borings were returned to our laboratory, and examined to confirm the field descriptions. Representative samples were then selected for laboratory testing. The laboratory tests consisted of thirty-seven (37) percent soil fines passing the No. 200 sieve determinations, thirty-seven (37) natural moisture content determinations, fifteen (15) Atterberg Limits tests, twelve (12) constant head hydraulic conductivity tests, and two (2) organic content determinations. These tests were performed in order to aid in classifying the soils and to further evaluate their engineering properties. The laboratory tests are provided in Section 5.3.

3.0 FINDINGS

3.1 Surface Conditions

Mr. Kevin P. Fisher, E.I. with GSE visited the site on January 30, 2020 to observe the site conditions and mark the boring locations. Mr. Jason Kite with Jason Kite, LLC was retained by GSE to clear lanes to allow access to the boring locations for drilling equipment.

The perimeter of the site is heavily wooded with large trees and thick underbrush. The center of the site has several lanes cleared throughout it. The site is bordered by Fort Clarke Boulevard to the east. Residential homes are present west and south of the site while a wooded area is located north of the site.

The topography at the site is gently to moderately sloping down toward the east from the west. Regional topography is gently rolling hills. The provided Conceptual Layout #2 indicates the ground surface elevations at the site are near elevations 106 to 133 feet.

3.2 Subsurface Conditions

The locations of the auger and SPT borings are provided on Figure 2. Complete logs for the borings are provided in Sections 5.1 and 5.2. Descriptions for the soils encountered are accompanied by the Unified Soil Classification System symbol (SM, SP-SM, etc.) and are based on visual examination of the recovered soil samples and the laboratory tests performed. Stratification boundaries between the soil types should be considered approximate, as the actual transition between soil types may be gradual.

The supplemental auger borings located in Basin 1 (P-13 through P-27) indicate the soils across these areas are somewhat consistent. The auger borings initially penetrated 1.5 to 15 feet of a near-surface sandy stratum consisting of poorly graded sand, sand with silt, sand with clay, and silty sand (SP, SP-SM, SP-SC, SM). This was underlain by clayey to very clayey sand (SC, SC/CL) to depths of 6.5 to 15 feet bls overlying clay-rich soils consisting of sandy clay, clay with sand, and clay (CL/CH) to the explored depths of 15 feet bls.

The supplemental auger borings located in Basin 2 (P-9 through P-12) indicate the soils across these areas are somewhat consistent. The auger borings initially penetrated 2.5 to 15 feet of a near-surface stratum consisting of clayey to very clayey sand (SC, SC/CL). This was underlain by clay-rich soils consisting of sandy clay and clay with sand (CL/CH) to the explored depths of 15 feet bls. Auger boring P-11 encountered silty sand (SM) to a depth of 1.5 feet bls.

The supplemental auger borings located in Basin 3 (P-28 through P-37) indicate the soils across these areas are somewhat consistent. The auger borings initially penetrated 1.5 to 10 feet of a near-surface sandy stratum consisting of poorly graded sand and sand with clay (SP, SP-SC) when encountered. This was underlain by clayey to very clayey sand (SC, SC/CL) to depths of 5 to 15 feet bls overlying clay-rich soils consisting of sandy clay, clay with sand, and clay (CL/CH) to the explored depths of 15 feet bls.

The preliminary auger borings located in the proposed northern stormwater management facility (P-1 through P-4) indicate the soils across these areas are somewhat consistent. The auger borings generally encountered 1 to 15 feet of a near-surface sandy stratum consisting of sand with silt and sand with clay (SP-SM, SP-SC). This was underlain by clay-rich confining soils consisting of very clayey sand, clay with sand, and clay (SC/CL, CL/CH) to the explored depth of 15 feet bls.

The preliminary auger borings located in the proposed southern stormwater management facility (P-5 through P-8) indicate the soils across these areas are somewhat consistent. The auger borings generally encountered clay-rich confining soils consisting of very clayey sand, sandy clay, and clay with sand (SC/CL, CL/CH) with interbedded clayey sand (SC) to depths of 11.5 to 15 feet bls. Soil borings P-6 and P-7 encountered sand with clay with trace limestone (SP-SC) underlying the confining soils to the explored depth of 15 feet bls.

The supplemental SPT borings within the area of the proposed buildings (B-29 through B-49) initially penetrated a 1 to 7 feet thick stratum of poorly graded sand, sand with silt, and sand with clay (SP, SP-SM, SP-SC). This was underlain by interbedded strata of clayey to very clayey sand (SC, SC/CL) to depths of 2.5 to 17 feet bls overlying clay-rich soils consisting of sandy clay, clay with sand, and clay (CL/CH) to depths of 12 to 20 feet bls. Several borings encountered sand with clay (SP-SC) or clayey to very clayey sand (SC, SC/CL) underlying the clay-rich soils. SPT boring B-39 encountered elastic silt (MH) from 1 to 2.5 feet bls. SPT boring B-42 encountered limestone at 19.5 feet bls.

The preliminary SPT borings within the area of the proposed buildings (B-1 through B-28) initially penetrated 0.5 to 12 feet of a sandy stratum consisting of poorly graded sand, sand with silt, sand with clay, and silty sand (SP, SP-SM, SP-SC, SM). This was underlain by interbedded strata of clayey sand (SC) to depths of 4 to 17 feet bls overlying clay-rich soils consisting of very clayey sand, sandy clay, clay with sand, and clay (SC/CL, CL/CH) to the explored depth of 20 feet bls. Several borings encountered sand with clay or clayey sand (SP-SC, SC) underlying the clay-rich soils.

The poorly graded sand, sand with clay, sand with silt, silty sand, and clayey to very clayey sand is generally in a very loose to very dense condition with N-values ranging from 0 to 50 blows per foot. The clay-rich soils (CH) are generally in a soft to very hard condition with N-values ranging from 4 to 54 blows per foot. The limestone encountered in SPT boring B-42 is generally in a very hard condition with an N-value of 50 blows per foot.

Weight-of-hammer strength materials were encountered in SPT boring B-16 within the surficial sandy soils in the upper 3 feet bls. These isolated events are consistent with native, very loose near-surface sand deposits common in this area of Alachua County.

The groundwater table was encountered in SPT borings B-1 and B-2 at depths of 7 and 9 feet bls, respectively, at the time of our preliminary investigation.

3.3 Review of Published Data

The majority of the site is mapped as four soil series by the Soil Conservation Service (SCS) Soil Survey for Alachua County[1]. The northwestern portion of the site is mapped as Lochloosa fine sand, 5 to 8 percent slopes, the northeastern portion of the site is mapped as Millhopper sand, 0 to 5 percent slopes, the southwestern portion of the site is mapped as Arredondo fine sand, 0 to 5 percent slopes, and the remainder of the site is mapped as Lochloosa fine sand, 2 to 5 percent slopes. The following soil descriptions are from the Soil Survey.

Arredondo fine sand, 0 to 5 percent slopes – This nearly level to gently sloping, well-drained soil is in both small and large areas of uplands. Slopes are smooth to convex. The areas are irregular in shape and range from about 10 to 160 acres in size.

Typically, the surface layer is dark grayish brown fine sand about 8 inches thick. The subsurface layer is fine sand to a depth of 49 inches. The upper 23 inches is yellowish brown, and the lower 18 inches is brownish yellow. The subsoil extends to a depth of 86 inches or more. The upper 5 inches is yellowish brown loamy sand; the next 10 inches is yellowish brown sandy clay loam, and the lower 22 inches is dark yellowish brown sandy clay and sandy clay loam.

Included with this soil in mapping are small depressional areas of soils that have a very dark gray or black surface layer 8 to 24 inches thick. This layer overlies gray sandy material. These areas are shown by wet spot symbols. Also included are small areas of Fort Meade, Gainesville, Kendrick, and Millhopper soils. A few areas of this soil include Arredondo soils that have 5 to 8 percent slopes. Some areas of this soil in the western part of the county have small spots of strongly acid to medium acid soil material 40 to 70 inches deep to calcareous limestone. Limestone boulders, fragments of limestone, and sinkholes are in some areas of this soil, mainly in the limestone plain sections of the western part of the county. Most of these boulders are siliceous. The sinkholes and the boulders are shown by appropriate map symbols. Total included areas are about 15 percent.

In this Arredondo soil, the available water capacity is low in the sandy surface and subsurface layers and low to medium in the loamy subsoil. Permeability is rapid in the surface and subsurface layers and moderately slow to moderate in the loamy subsoil. Natural fertility is low in the sandy surface and subsurface layers and medium in the finer textured subsoil. Organic matter content is low. The water table in this soil is at a depth of more than 72 inches. Surface runoff is slow.

Millhopper sand, 0 to 5 percent slopes – This nearly level to gently sloping, moderately well drained soil is in small and large irregularly shaped areas on uplands and on slightly rolling knolls in the broad flatwoods. Slopes are mostly nearly smooth or convex. The areas are variable in size. They range from about 10 to 250 acres.

Typically, the surface layer is dark grayish brown sand about 9 inches thick. The subsurface layer is sand or fine sand about 49 inches thick. The upper 17 inches is yellowish brown, the next 22 inches is light yellowish brown, and the lower 10 inches is very pale brown. The subsoil extends to a depth of 89 inches. The upper 6 inches is yellowish brown loamy sand that has grayish and brownish mottles; the next 22 inches is light gray, mottled sandy clay loam; and the lower 3 inches is light gray, mottled sandy loam.

[1] Soil Survey of Alachua County, Florida. Soil Conservation Service, U.S. Department of Agriculture.

Included with this soil in mapping are small areas of Arredondo, Bonneau, Fort Meade, Gainesville, Kanapaha, Lochloosa, and Sparr soils. Siliceous limestone boulders and small sinks are within some delineations. Small areas of Millhopper soils that have 5 to 8 percent slopes are also included. About 25 acres mapped as this Millhopper soil along the Santa Fe River is occasionally flooded. Total included areas are about 20 percent or less.

This Millhopper soil has a water table that is at a depth of 40 to 60 inches for 1 to 4 months and at a depth of 60 to 72 inches for 2 to 4 months during most years. The available water capacity is low in the surface and subsurface layers and is low to medium in the subsoil. Permeability is rapid in the surface and subsurface layers, moderately rapid in the upper 6 inches of the subsoil, and slow to moderately slow below this depth. Natural fertility is low. Organic matter content is low to moderately low.

Lochloosa fine sand, 2 to 5 percent slopes - This gently sloping, somewhat poorly drained soil is in small and large areas on the rolling uplands. Slopes are slightly convex.

Typically, the surface layer is dark gray fine sand about 7 inches thick. The subsurface layer is yellowish brown loamy sand or sand to a depth of 31 inches. It has light gray and yellowish brown mottles below a depth of 21 inches. The subsoil extends to 76 inches. The upper 4 inches is dark gray, mottled fine sandy loam; the next 19 inches is gray sandy loam; and the lower 22 inches is gray sandy clay loam. Between depths of 76 and 83 inches, the underlying material is mixed light gray and greenish gray sandy clay loam.

This Lochloosa soil has a water table that is about 30 to 40 inches below the surface for 1 to 4 months during most years. The water table rises to a depth of 20 to 30 inches for 1 to 3 weeks. Surface runoff is slow. The available water capacity is low to medium in the sandy surface and subsurface layers and medium in the subsoil. Permeability is rapid in the surface and subsurface layers, moderate in the upper part of the subsoil, and slow in the lower part.

Lochloosa fine sand, 5 to 8 percent slopes. - This sloping, somewhat poorly drained soil is in relatively small areas on sharp breaking slopes and along long, narrow slopes of the upland. The areas are mostly irregular or elongated in shape and range from about 10 to 50 acres.

Typically, the surface layer is grayish brown fine sand about 5 inches thick. The subsurface layer is light yellowish brown, mottled fine sand to a depth of 25 inches. The subsoil extends to a depth of 67 inches. The upper 5 inches is yellowish brown, mottled sandy loam; the next 5 inches is mottled light yellowish brown and gray sandy clay loam; and the lower 32 inches is gray mottled sandy clay loam. Between depths of 67 to 80 inches, the underlying material is gray, mottled sandy clay and fine pockets of sandy loam and sandy clay loam.

Included with this soil are small areas of Blichton, Kendrick, Micanopy, and Norfolk soils. Also included are small areas of soils that are similar to Lochloosa soils in drainage and texture but have a subsoil less than 20 inches below the surface. Small areas of Lochloosa soils that have 2 to 5 percent slopes are included. Small moderately eroded spots are in some areas. Rock outcrops and sinkholes are in some areas and are shown by appropriate symbols. Total included areas are about 20 percent.

This Lochloosa soil has a water table that is about 30 to 50 inches below the surface for 1 to 3 months during most years. The water table may be at a depth of 20 to 30 inches for 1 to 3 weeks. Wetness is caused by hillside seepage. Surface runoff is medium on this soil. The available water capacity is low in the sandy surface layer and medium in the subsoil. Permeability is rapid in the surface and subsurface layers, moderate in the upper part of the subsoil, and slow in the lower part. Natural fertility is low in the sandy surface and subsurface layers and low to medium in the loamy subsoil. Organic matter content is low in the surface layer.

3.4 Laboratory Soil Analysis

Selected soil samples recovered from the soil borings were analyzed for the percent soil fines passing the No. 200 sieve, natural moisture content, Atterberg Limits, hydraulic conductivity, and organic content. Samples selected for laboratory testing were collected at depths ranging from 1 to 15 feet bls. These tests were performed to confirm visual soil classification and evaluate their engineering properties. The complete laboratory report is provided in Section 5.3.

The laboratory tests indicate the tested soils consist of sand with silt, sand with clay, silty sand, clayey sand, very clayey sand, sandy clay, clay with sand, clay, and elastic silt. The tested sand with silt (SP-SM) contains approximately 5.9 to 10 percent soil fines passing the No. 200 sieve with natural moisture contents of about 8.2 to 12 percent. The tested sand with clay (SP-SC) contains approximately 10 percent soil fines passing the No. 200 sieve with a natural moisture content of about 7.4 percent. The tested silty sand (SM) contains approximately 14 percent soil fines passing the No. 200 sieve with a natural moisture content of about 8.1 percent. The tested clayey sand (SC) contains approximately 13 to 27 percent soil fines passing the No. 200 sieve with natural moisture contents of about 6.9 to 16 percent. The tested very clayey sand (SC/CL) contains approximately 35 to 43 percent soil fines passing the No. 200 sieve with natural moisture contents of about 22 to 33 percent. The tested sandy clay (CH) contains approximately 51 to 68 percent soil fines passing the No. 200 sieve with natural moisture contents of about 32 to 43 percent. The tested clay with sand (CH) contains approximately 71 to 84 percent soil fines passing the No. 200 sieve with natural moisture contents of about 28 to 61 percent. The tested clay (CH) contains approximately 87 to 95 percent soil fines passing the No. 200 sieve with natural moisture contents of about 28 to 55 percent. The tested elastic silt (MH) contains approximately 70 percent soil fines passing the No. 200 sieve with a natural moisture content of about 50 percent.

Atterberg Limits tests indicate the tested clayey sand (SC) has a Liquid Limit (LL) value of 30, Plastic Limit (PL) value of 20, and Plasticity Index (PI) value of 10. This corresponds to a material with low potential (LL < 50 and PI < 25) for expansive behavior[2]. The tested very clayey sand (SC/CL) has LL values of 55 to 57, PL values of 22 to 24, and PI values of 31 to 35. This corresponds to a material with marginal potential (50 ≤ LL ≤ 60 and 25 ≤ PI ≤ 35) for expansive behavior. The tested sandy clay (CH) has LL values of 53 to 125, PL values of 24 to 31, and PI values of 29 to 94. This corresponds to a material with marginal to high potential (50 ≤ LL ≤ 60 and 25 ≤ PI ≤ 35; LL > 60 and PI > 35) for expansive behavior. The tested clay with sand (CH) has LL values of 54 to 134, PL values of 23 to 52, and PI values of 20 to 90. This corresponds to a material with marginal to high potential (50 ≤ LL ≤ 60 and 25 ≤ PI ≤ 35; LL > 60 and PI > 35) for expansive behavior. The tested clay (CH) has LL values of 150 to 151, PL values of 39 to 49, and PI values of 101 to 112. This corresponds to a material with high potential (LL > 60 and PI > 35) for expansive behavior. The tested elastic silt (MH) has a LL value of 62, PL value of 43, and PI value of 19. This corresponds to a material with high potential (LL > 60) for expansive behavior.

The constant head hydraulic conductivity test results indicate the near-surface sand with clay (SP-SC) has a hydraulic conductivity value of 1.8 to 11 feet per day. The tested sand with silt (SP-SM) has hydraulic conductivity values of 4.6 to 5 feet per day. The tested silty sand (SM) has a hydraulic conductivity value of 16 feet per day. The tested clayey sand (SC) has hydraulic conductivity values of 1.3 to 9.3 feet per day.

The organic content determinations from the preliminary investigation indicate the tested very clayey sand (SC/CL) from SPT boring B-20 contains approximately 12 percent organic matter. The tested clay with sand (CL/CH) from SPT boring B-14 contains approximately 9 percent organic matter. Typically, soils with greater than 5 percent organic content are considered unsuitable for conventional shallow foundation support.

[2] U.S. Department of the Army USA, 1983, Foundations in Expansive Soils, TM 5-818-7, p. 4-1.

4.0 EVALUATION AND RECOMMENDATIONS

4.1 General

The following recommendations are made based upon our understanding of the proposed construction, a review of the attached soil borings and laboratory test data, and experience with similar projects and subsurface conditions. If plans or the location of proposed construction changes from those discussed previously, GSE requests the opportunity to review and possibly amend our recommendations with respect to those changes.

The final design of a foundation system is dependent upon adequate integration of geotechnical and structural engineering considerations. Consequently, GSE must review the final foundation design in order to evaluate the effectiveness and applicability of our initial analyses, and to determine if additional recommendations may be warranted. Without such a review, the recommendations presented herein could be misinterpreted or misapplied resulting in potentially unacceptable performance of the foundation system.

The performance of site improvements may be sensitive to their post-construction relationship to site groundwater levels, seepage zones, or soil/rock characteristics exposed at final site grades. GSE recommends that use of boring information for final design of all site improvements be predicated on proper horizontal and vertical control of borings.

In this section of the report, we present our geotechnical parameters and recommendations to assist with building foundation and stormwater management designs as well as our general site preparation guidelines.

4.2 Groundwater

The groundwater table was encountered in SPT borings B-1 and B-2 at depths of 7 and 9 feet bls, respectively, at the time of our preliminary investigation. You should expect water to perch on top of the very clayey sand and clay-rich soils after periods of heavy and seasonal rainfall. The perched seasonal high groundwater levels are indicated on the boring logs.

4.3 Building Foundations

The soil borings within the proposed building footprints indicate the soils at the site are somewhat consistent. The borings initially penetrated a 1 to 7 feet thick stratum of poorly graded sand, sand with silt, and sand with clay (SP, SP-SM, SP-SC). This was underlain by interbedded strata of clayey to very clayey sand (SC, SC/CL) to depths of 2.5 to 17 feet bls overlying clay-rich soils consisting of sandy clay, clay with sand, and clay (CL/CH) to depths of 12 to 20 feet bls. Several borings encountered sand with clay (SP-SC) or clayey to very clayey sand (SC, SC/CL) underlying the clay-rich soils. SPT boring B-39 encountered elastic silt (MH) from 1 to 2.5 feet bls. Laboratory tests conducted on the very clayey sand, sandy clay, clay with sand, clay indicate they are marginally to highly expansive.

Expansive Soil Risks

The majority of the soil borings encountered clay-rich soils within 10 feet bls. The laboratory testing indicates the clay-rich material has a marginal to high potential for expansive behavior. Expansive soils are moisture sensitive and can expand as moisture contents increase causing structures to heave. Similarly, these soils can shrink when moisture contents decrease causing structures to settle.

There are several foundation and subgrade preparation options for reducing the risk for differential foundation movement related to volume changes of the expansive clay soils. We wish to point out that these options will not eliminate this risk, but are intended to provide economical foundation and site preparation alternatives that should significantly reduce the risk, when compared to using conventional foundations and subgrade preparation methods. **We understand you intend to use a post-tensioned slab/foundation for the buildings.** Our recommendations for the building foundations are presented below.

Post-Tensioned Slab/Foundation

For buildings with potentially expansive clay-rich soils within 10 feet bls beneath the buildings, we recommend post-tensioned slabs in conjunction with limited undercutting and replacement. The current Florida Building code states that post-tensioned slab-on-ground, mat or raft foundations on expansive soils shall be designed in accordance with *PTI DC 10.5*.

The post-tensioned slab/foundation should be designed to resist bending moments resulting from foundation movement. It is our experience that the post-tensioned slab/foundation will consist of thickened sections approximately 20 to 24 inches thick around the perimeter and in a grid throughout the interior of the structure spaced no more than about 15 feet apart each direction. A post-tensioned cable is typically placed near the top and bottom of the thickened sections, and post-tensioned cables are also typically placed in the center of the slab spaced 4 to 6 feet apart in each direction. However, the post-tensioned foundation should be designed by an engineer or architect familiar with post-tensioned foundation design specifically intended to resist differential movements resulting from expansive soils.

The post-tensioned foundation design should consider edge moisture variation distances of 4 and 5 feet for center and edge lift, respectively. Maximum anticipated center and edge lift is 1 and 1.5 inches, respectively. A slab/subgrade friction coefficient of 0.4 can be assumed.

The foundations will likely bear directly on top of marginally expansive soils in a few isolated locations. Therefore, in areas where expansive soils are present at the foundation bearing surface, we recommend undercutting the expansive soils and replacing them with impermeable fill. The undercuts should extend a minimum of 12 inches beneath the foundation bottoms and a minimum of 1 foot beyond the foundation edges. The backfill must consist of a low permeability material to reduce the potential for irrigation or stormwater to wet the backfill soils and native soils below the bottom of the undercut. Low permeability backfill typically consists of clayey sand having between 15 and 25 percent soil fines passing the No. 200 sieve, or crushed limerock. The clayey sand fill must be compacted to a minimum of 98 percent of the Standard Proctor. Limerock must be compacted to 98 percent of the Modified Proctor. We recommend 6 inch lifts for the backfill.

The intent of undercutting and replacement is to create an impermeable "buffer" beneath the foundations that limits moisture intrusion/removal from the native soils beneath the undercut and beneath the interior of the building, which reduces the risk for expansion/contraction movements and subsequent foundation movements. We caution using this option in the summer months during the rainy season. Both the clayey sand and limerock base fill materials are moisture sensitive, and may not be compactable when wetted from daily rain showers, making this impractical to perform. If needed, flowable fill could be used in lieu of compacted backfill in the undercuts.

Based upon the soil conditions encountered and our limited understanding of the structural loads and site grading, we recommend the stiffened foundations be designed for a maximum allowable gross bearing pressure of 2,000 psf. The gross bearing pressure is defined as the soil contact pressure that can be imposed from the maximum structural loads, weight of the concrete foundations, and weight of the soil above the foundations. The foundations should be designed based upon the maximum load that could be imposed by all loading conditions.

All appropriate requirements of the latest edition of the IBC and the Post-Tensioning Institute should be followed in the design and construction of the post-tensioned slab foundations.

The foundations should be embedded a minimum of 18 inches below the lowest adjacent grade. Interior foundations or thickened sections should be embedded a minimum of 12 inches. The foundations should have minimum widths of 18 inches for strip footings, and 24 inches for columns, even though the maximum soil bearing pressure may not be fully developed.

The above recommendations have been presented in an effort to reduce the risk for foundation movement associated with expansive clay-rich soils. As with any construction project, the risk for foundation movement cannot be completely eliminated. Some cosmetic cracking could occur even after implementing recommendations above. GSE should be retained to inspect the undercut excavation prior to backfilling to ensure the undercut has been performed in accordance with our recommendations. Compaction testing should be performed for each backfill lift.

Organic Soil Recommendations

Borings B-14 and B-20 encountered organic material with 9 and 12 percent organic content at depths of 8.5 to 10 and 1 to 2.5 feet bls; respectively. The near surface organic rich material will likely be removed from standard clearing and grubbing. GSE recommends additional borings be performed to delineate the deeper organic matter encountered in boring B-20 to determine if it may affect the foundation performance. A post-tension slab at this location may be able to span over the area and not be affected by the decay and compression of organic material if it is an isolated occurrence.

4.4 Retaining Walls

Retaining walls are proposed to be constructed for the basement walls. The locations and elevations for the proposed retaining walls have not been provided at the time of this report. The recommendations for retaining walls are to be used for preliminary design purposes only and should be reviewed by GSE prior to construction to determine if additional recommendations are warranted. The retaining walls must be designed to resist the lateral stress of the existing and fill soils. The earth pressures will be influenced by the structural design of the walls, conditions of wall restraint, methods of construction, and/or compaction and material types being retained. Active earth pressure is commonly used for design of free-standing cantilever retaining walls and assumes wall movement. The “at-rest” condition assumes no wall movement. The recommended design lateral earth pressures do not include a factor of safety and do not provide for possible unbalanced hydrostatic pressure on the walls.

We recommend the retaining walls be designed assuming the retained soil will exert an active lateral stress equivalent to a fluid having a unit weight of 40 pcf, an at-rest lateral stress equivalent to a fluid having a unit weight of 60 psf, and a passive lateral stress equivalent to a fluid having a unit weight of 360 pcf. This assumes a clean sand backfill will be used behind the walls with a soil unit weight of 120 pcf, a coefficient of lateral earth pressure for the active condition, K_a, of 0.33, a coefficient of passive pressure K_p, of 3.00, and coefficient of friction of 0.4.

Backfill placed against the retaining structures should consist of clean sand fill with less than 10 percent soil fines passing the No. 200 sieve. The clean sand fill must extend out from the base of the wall at an angle of at least 45 degrees and 60 degrees from the vertical for the active and passive cases, respectively.

Foundation drains should be installed along the foundation edges along the proposed retaining walls. The purpose of foundation drains is to evacuate groundwater that may collect behind the walls and to promote groundwater drainage away from the retaining wall foundations. Failure to promote proper drainage may result in a perched water table behind the walls that impose an unanticipated lateral stress. If adequate drainage cannot be provided, GSE recommends the walls be designed for the hydrostatic pressures that may develop. GSE recommends the below grade basements be waterproofed. It should be noted that groundwater that may be perched on top of clay-rich soils should be evacuated from the site so that water does not become trapped behind the wall and become a water source for the underlying clay-rich soils. Failure to provide proper drainage could have adverse impacts to the performance of the foundations and below grade structures. GSE recommends we review the final grading plan to determine if additional recommendations are warranted to protect clay-rich soils or to provide positive drainage.

4.5 Site Preparation

The soils at this site should be suitable for supporting the proposed construction using normal, good practice site preparation procedures. The following recommendations are our general guidelines for site preparation.

4.5.1 Stripping

Strip the construction limits and 10 feet beyond the perimeter of all grass, roots, topsoil, and other deleterious materials. You should expect to strip to depths of 12 or more inches. Deeper stripping will likely be necessary due to major root systems present at the site.

Organic-rich soils (containing greater than 5 percent organic content) should be removed from beneath the building footprint or from within the zone of influence of the proposed foundation system.

4.5.2 Dewatering

Temporary dewatering is not expected to be necessary for this project. However, if needed, we anticipate dewatering can be accomplished with sumps placed near the construction area, or with underdrains connected to a vacuum pump.

In any case, the site should always be graded to promote runoff and limit the amount of ponding. Localized ponding of stormwater is expected without proper grading during construction, and could render previously acceptable surfaces unacceptable.

4.5.3 Proof-Rolling

Proof-roll the subgrade with heavy rubber-tired equipment, such as a loaded front-end loader or dump truck, to identify any loose or soft zones not found by the soil borings. The proof-rolling should be monitored by a geotechnical engineer or qualified technician. Undercut or otherwise treat these zones as recommended by the geotechnical engineer in this report.

4.5.4 Proof Compaction

In areas where undercutting and backfilling are not performed, compact the subgrade to a density of at least 95 percent of the Modified Proctor maximum dry density (ASTM D1557). The specified compaction should be obtained to a depth of 1 foot below the foundation bottoms and the existing grade prior to placing fill. Vibratory roller equipment should not be used within approximately 100 feet of existing structures. Lighter "walk-behind" compaction equipment may be used to achieve the degree of compaction.

Should clayey sand be encountered at the bearing surface, this material should be probed and visually confirmed to be unyielding in the upper 12 inches in lieu of density testing. If the foundation excavations penetrate the clayey sand, the excavation should be performed in a manner that reduces soil disturbance. Clayey sand soils (with fines content in excess of 15 percent) that are removed and replaced or appreciably disturbed need to be re-compacted to 98 percent of the Standard Proctor maximum dry density (ASTM D698).

4.5.5 Fill Placement

Imported fill placed to raise the site above existing grades should consist of clean sand having less than 10 percent passing the No. 200 sieve. On-site soils meeting the requirements of Section 4.10 may also be used as structural fill. The fill should be placed in maximum 12-inch loose lifts that are compacted to at least 95 percent of the Modified Proctor maximum dry density (ASTM D1557). If lighter "walk-behind" compaction equipment is used, this may require lifts of 4 inches or less to achieve the required degree of compaction.

4.6 Site Grading Considerations

The soil borings indicate a surficial layer of sandy soil overlies clayey sand and clay-rich soils. Generally, the soils become "heavier" (more clay-rich) with depth. The heavier soils are more moisture sensitive and less workable, and have more potential for expansive behavior. For these reasons, we recommend site grading consider filling to raise grades rather than cutting into grade. Cutting into grade can result in exposing soils that are more difficult to work, are potentially expansive requiring remediation and have low infiltration characteristics that results in high (unworkable) moisture contents and localized ponded stormwater. Cuts of more than a few feet can result in creating conditions that are less workable.

4.7 Quality Control and Construction Materials Testing

It should be noted that the geotechnical engineering design does not end with the advertisement of the construction documents. As the geotechnical engineer of record, GSE is the most qualified to perform the construction materials testing that will be required for this project. The benefits of having the geotechnical engineer of record also perform the construction materials testing are numerous. If GSE continues to be involved with the project through construction, we will be able to constantly re-evaluate and possibly alter our geotechnical recommendations in a timely and cost-effective manner once final design and construction techniques are developed. This often results in cost savings for the project.

We recommend performing compaction testing beneath the concrete floor slab and the building foundations. We recommend one test be performed every 50 linear feet of continuous footing and every other column footing, per foot depth of fill or native material. We recommend a compaction test be performed for each 2,500 square feet of floor area per foot of fill or native material, or a minimum of three tests each, whichever is greater. Test all footing excavations to a depth of 12 inches per foot of backfill at the frequencies stated above.

4.8 Undercutting Requirements

Perform selective undercutting and backfilling as discussed in Section 4.3.

4.9 Stormwater Management

The soil conditions at the stormwater management facilities are somewhat consistent; initially penetrating poorly graded sand, sand with silt, sand with clay, and silty sand overlying clayey to very clayey sand. This was underlain by clay-rich soils in several borings.

The water table was not encountered in the borings at the time of our exploration. We anticipate the seasonal high groundwater table to be perched on the very clayey sands and clay-rich soils.

The laboratory permeability tests indicate the surficial layer of sand with clay and silty sand has hydraulic conductivity values of 11 to 16 feet per day. The clayey sand has hydraulic conductivity values of 1.3 to 9.3 feet per day. The underlying very clayey sand, sandy clay, clay with sand, and clay are expected to be confining soils.

Based upon our findings and test results, our recommended soil parameters for the stormwater management design in the explored areas are presented below. The recommended parameters consider the results of the permeability tests, wash 200 determinations, and our experience with these types of soils. The parameters below do not consider a factor of safety.

Proposed Basin 1 (P-12 thru P-27)

1. Base elevation of effective or mobilized aquifer (average depth of confining layer) equal to 10.5 feet bls.
2. Unsaturated vertical infiltration rate of 5 feet per day.
3. Horizontal hydraulic conductivity equal to 7.5 feet per day.
4. Specific yield (fillable porosity) of 25 percent.
5. Average seasonal high groundwater table depth equal to 10 feet bls.

Proposed Basin 2 (P-28 thru P-37)

1. Base elevation of effective or mobilized aquifer (average depth of confining layer) equal to 9 feet bls.
2. Unsaturated vertical infiltration rate of 4 feet per day.
3. Horizontal hydraulic conductivity equal to 6 feet per day.
4. Specific yield (fillable porosity) of 20 percent.
5. Average seasonal high groundwater table depth equal to 8.5 feet bls.

In areas where clay-rich soils are present at the basin bottom, we recommend these soils be undercut a minimum of 2 feet and backfilled with the on-site sands, sands with silt, and sands with clay (SP, SP-SM, SP-SC) having a maximum of 12 percent soil fines passing the No. 200 sieve. The intent of this undercutting and replacement is to provide a more uniform sand "blanket" at the basin bottom that allows the migration of water to the deeper deposits of sand. This sand blanket will also reduce the potential for clay-fines leaching out of the soils when water is present in the basin that can result in a thin layer of confining type material on the basin bottom that can reduce the effectiveness of the basin.

4.10 Fill Suitability

The soils encountered at this site within the explored depths range from sands (SP) to clays (CL/CH). A discussion of the suitability for reuse as structural fill for each soil classification according to the Unified Soil Classification System (USCS) designation is provided below.

SP, SP-SM – Sands (SP) and sand with silt (SP-SM) have less than 5 percent and 12 percent soil fines passing the No. 200 sieve, respectively, and are typically well draining soils that are suitable for reuse as structural fill. The sands with silt may require moisture conditioning (drying) to make the material more workable. These soils will require stockpiling and drying before they are reused if they are excavated from below the water table.

SM – Silty sands (SM) can have between 12 percent and 50 percent soil fines passing the No. 200 sieve. Silty sands are typically non-plastic or have low plasticity, and can be reused as structural fill with precautions. Silty sands can be moisture sensitive and difficult to work and compact and can rut if the moisture content is near or above the optimum moisture content. We recommend these soils be moisture conditioned (dried) so that the moisture content during use is at or below the optimum moisture content. Aerating and exposure to the sun is typically the most effective methods of drying these soils. It may not be practical to reuse these materials during the wet season, as frequent rain showers may not allow these soils to dry to a workable moisture content. Suitable silty sands are limited to soil having less than 30 percent soil fines passing the No. 200 sieve. Silty sands with more than 30 percent soil fines are especially moisture sensitive, and are not recommended for reuse as structural fill. These soils will behave more as sandy silt, and for this reason, very silty sands having more than 30 percent soil fines passing the No. 200 sieve have been assigned a dual classification of SM/ML. Silty sand soils that are excavated from below the water table are not recommended for reuse as structural fill due to the amount of time that will be required to dry these soils to a workable condition.

SC – Clayey sand (SC) soils can have between 12 percent and 50 percent soil fines passing the No. 200 sieve. Clayey sands can have a high range of plasticity, varying from a PI of 7 or greater and plotting above the A-line to highly plastic. Friable clayey sands are typically suitable for use as structural fill with precautions. Clayey sands will be moisture sensitive and difficult to work and compact and can rut during placement if the moisture content is near or above the natural moisture content. We recommend these soils be moisture conditioned (dried) so that the moisture content during use is at or below the optimum moisture content. Aerating and exposure to the sun is typically the most effective methods of drying these soils. It may not be practical to reuse these materials during the wet season, as frequent rain showers may not allow these soils to dry to a workable moisture content. Suitable clayey sands are limited to soil having less than 30 percent soil fines passing the No. 200 sieve. Clayey sands with more than 30 percent soil fines passing the No. 200 sieve are especially moisture sensitive and are typically highly plastic, and are not recommended for reuse as structural fill. These soils will behave more as sandy clay, and for this reason, very clayey sands having more than 30 percent soil fines passing the No. 200 sieve have been assigned a dual classification of SC/CH or SC/CL. Clayey sand soils that are excavated from below the water table are not recommended for reuse as structural fill due to the amount of time that will be required to dry these soils to a workable condition.

ML, MH, CL, CH – Silts and clays are not suitable materials for reuse as structural fill.

When using on-site soils as fill materials, we recommend the silty and clayey sand soils (SM, SC) be used in the lower depths of the fill. Sand and sand with silt (SP, SP-SM) should be used in the upper portions of the fill. We recommend a minimum of 2 feet of sand (SP, SP-SM) cover the silty and clayey sand fill materials to reduce the potential for soggy surface conditions due to the low permeability characteristics of the silty and clayey sand materials.

4.11 Surface Water Control and Landscaping

Roof gutters should be considered to divert runoff away from the buildings. The gutter downspouts should discharge a minimum of 10 feet from the structures to reduce the amount of water collecting around the foundations. Where possible, the gutter downspouts should discharge directly into the storm sewer system or onto the asphalt paved areas in order to reduce the amount of water collecting around the foundations. Grading of the site should be such that water is diverted away from the buildings on all sides to reduce the potential for erosion and water infiltration along the foundation.

With respect to landscaping, it is recommended that existing and planted trees and large “tree-like” shrubbery with potential for developing large root systems be planted a minimum distance of half their mature height, and preferably their expected final height, away from the structures. The purpose of this is to reduce the potential for foundation or slab movements from the growth of root systems as the landscaping matures. Consideration should also be given to using landscaping that has a low water demand, so that excessive irrigation is not conducted around the structures.

If excavations for underground utilities encounter the clay-rich soils, the excavations should be made such that they do not trap water (i.e., "swimming pool" or "bowl" effect). Sloping the excavations, installing underdrains, or extending the excavation to a more pervious area can achieve this. Allowing surface water to become trapped within utility trenches or other excavations (including footings) serves as a potential water source for the clay, which can result in shrink swell of these soils. Furthermore, during construction, surface water within the building areas must be controlled such that the water does not become trapped and represent a source of water for the underlying clay-rich soils. Mismanagement of the surface water during construction within the building footprint could result in subsequent post-construction slab movement.

The above recommendations are intended to maintain relatively consistent moisture contents within the clay-rich expansive soils encountered by the borings. The importance of proper surface water control and landscaping placement cannot be overemphasized in accomplishing this objective.

SUMMARY REPORT OF LABORATORY TEST RESULTS

Project Number: 14185A

Project Name: Lullwater at Fort Clarke

Boring Number	Depth (ft)	Soil Description	Natural Moisture Content (%)	Liquid Limit	Plastic Limit	Plasticity Index	Percent Passing No. 200 Sieve	Organic Content (%)	Hydraulic Conductivity (ft/day)	Unified Soil Classification
B-39	1-2.5	Stiff dark gray elastic SILT	50	62	43	19	70			MH
B-41	7-8.5	Loose to medium dense brown and orange clayey SAND	8.3				13			SC
B-42	1-2.5	Stiff gray and orange sandy CLAY	43	64	29	35	66			CH
B-43	4-5.5	Medium dense gray and brown very clayey SAND with sandstone	33				40			SC/CL
B-45	13.5-15	Medium dense to very dense pale gray and pale brown cemented clayey SAND	14				16			SC
B-46	2.5-4	Very loose to medium dense brown & gray cemented clayey SAND w/ sandstone	16				25			SC
B-47	2.5-4	Very loose to loose brown and gray clayey SAND with sandstone	24	30	20	10	27			SC
B-48	7-8.5	Stiff to very stiff green and orange CLAY with sand	61	134	44	90	82			CH

5.4 Key to Soil Classification

KEY TO SOIL CLASSIFICATION CHART

Criteria for Assigning Group Symbols and Group Names Using Laboratory Tests				SYMBOLS		GROUP NAME
				GRAPHIC	LETTER	
COARSE-GRAINED SOILS	Gravels	Clean Gravels	$Cu \geq 4$ and $1 \leq Cc \leq 3$		GW	Well graded GRAVEL
More than 50% retained on No. 200 sieve	More than 50% of coarse fraction retained on No. 4 sieve	Less than 5% fines	$Cu < 4$ and/or $1 > Cc > 3$		GP	Poorly graded GRAVEL
		Gravels with fines	Fines classify as ML or MH		GM	Silty GRAVEL
		More than 12% fines	Fines classify as CL or CH		GC	Clayey GRAVEL
	Sands	Clean Sands	$Cu \geq 6$ and $1 \leq Cc \leq 3$		SW	Well graded SAND
	50% or more of coarse fraction passes No. 4 sieve	Less than 5% fines	$Cu < 6$ and/or $1 > Cc > 3$		SP	Poorly graded SAND
		Sand with fines	Fines classify as ML or MH		SP-SM	SAND with silt
		5% ≤ fines < 12%	Fines classify as CL or CH		SP-SC	SAND with clay
		Sand with fines	Fines classify as ML or MH		SM	Silty SAND
		12% ≤ fines < 30%	Fines classify as CL or CH		SC	Clayey SAND
		Sand with fines	Fines classify as ML or MH		SM	Very silty SAND
		30% fines or more	Fines classify as CL or CH		SC	Very clayey SAND
FINE-GRAINED SOILS	Clays	inorganic	50% ≤ fines < 70%		CL/CH	Sandy CLAY
50% or more passes the No. 200 sieve			70% ≤ fines < 85%		CL/CH	CLAY with sand
			fines ≥ 85%		CL/CH	CLAY
	Silts and Clays	inorganic	PI > 7 and plots on/above "A" line		CL	Lean CLAY
	Liquid Limit less than 50		PI < 4 or plots below "A" line		ML	SILT
		organic	Liquid Limit - oven dried / Liquid Limit - not dried < 0.75		OL	Organic clay / Organic silt
	Silts and Clays	inorganic	PI plots on or above "A" line		CH	Fat CLAY
	Liquid Limit 50 or more		PI plots below "A" line		MH	Elastic SILT
		organic	Liquid Limit - oven dried / Liquid Limit - not dried < 0.75		OH	Organic clay / Organic silt
HIGHLY ORGANIC SOILS	Primarily organic matter, dark in color, and organic odor				PT	PEAT

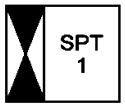
CORRELATION OF PENETRATION RESISTANCE WITH RELATIVE DENSITY AND CONSISTENCY

	No. OF BLOWS, N	RELATIVE DENSITY
	0 - 4	Very Loose
	5 - 10	Loose
SANDS:	11 - 30	Medium dense
	31 - 50	Dense
	OVER 50	Very Dense

	No. OF BLOWS, N	RELATIVE DENSITY
	0 - 8	Very Soft
	9 - 18	Soft
LIMESTONE:	19 - 32	Moderately Hard
	33 - 50	Hard
	OVER 50	Very Hard

	No. OF BLOWS, N	CONSISTENCY
	0 - 2	Very Soft
SILTS	3 - 4	Soft
&	5 - 8	Firm
CLAYS:	9 - 15	Stiff
	16 - 30	Very Stiff
	31 - 50	Hard
	OVER 50	Very Hard

SAMPLE GRAPHIC TYPE LEGEND



Location of SPT Sample

Location of Auger Sample

PARTICLE SIZE IDENTIFICATION

BOULDERS:		Greater than 300 mm
COBBLES:		75 mm to 300 mm
GRAVEL:	Coarse -	19.0 mm to 75 mm
	Fine -	4.75 mm to 19.0 mm
SANDS:	Coarse -	2.00 mm to 4.75 mm
	Medium -	0.425 mm to 2.00 mm
	Fine -	0.075 mm to 0.425 mm
SILTS & CLAYS:		Less than 0.075 mm

LABORATORY TEST LEGEND

LL	=	Liquid Limit, %
PL	=	Plastic Limit, %
PI	=	Plasticity Index, %
% PASS - 200	=	Percent Passing the No. 200 Sieve
MC	=	Moisture Content, %
ORG	=	Organic Content, %
k_h	=	Horizontal Hydraulic Conductivity, ft/day

6.0 LIMITATIONS

6.1 Warranty

This report has been prepared for our client for his exclusive use, in accordance with generally accepted soil and foundation engineering practices, and makes no other warranty either expressed or implied as to the professional advice provided in the report.

6.2 Auger and SPT Borings

The determination of soil type and conditions was performed from the ground surface to the maximum depth of the borings, only. Any changes in subsurface conditions that occur between or below the borings would not have been detected or reflected in this report.

Soil classifications that were made in the field are based upon identifiable textural changes, color changes, changes in composition or changes in resistance to penetration in the intervals from which the samples were collected. Abrupt changes in soil type, as reflected in boring logs and/or cross sections may not actually occur, but instead, be transitional.

Depth to the water table is based upon observations made during the performance of the auger and SPT borings. This depth is an estimate and does not reflect the annual variations that would be expected in this area due to fluctuations in rainfall and rates of evapotranspiration.

6.3 Site Figures

The measurements used for the preparation of the figures in this report were made using the provided site plan and by estimating distances from existing structures and site features. Figures in this report were not prepared by a licensed land surveyor and should not be interpreted as such.

6.4 Unanticipated Soil Conditions

The analysis and recommendations submitted in this report are based upon the data obtained from soil borings performed at the locations indicated on Figure 2. This report does not reflect any variations that may occur between these borings.

The nature and extent of variations between borings may not become known until excavation begins. If variations appear, we may have to re-evaluate our recommendations after performing on-site observations and noting the characteristics of any variations.

6.5 Misinterpretation of Soil Engineering Report

GSE Engineering & Consulting, Inc. is responsible for the conclusions and opinions contained within this report based upon the data relating only to the specific project and location discussed herein. If others make the conclusions or recommendations based upon the data presented, those conclusions or recommendations are not the responsibility of GSE.

Summary Treatment Report Version: 4.3.5

Project: Lullwater Apartments

Analysis Type: Specified Removal Efficiency

Date:12/2/2022

BMP Types:

Catchment 1 - (DA - Basin 2) Retention

Based on % removal values to the nearest percent

Routing Summary
Catchment 1 Routed to Outlet

Total nitrogen target removal met? **Yes**
Total phosphorus target removal met? **Yes**

Summary Report

Nitrogen

Surface Water Discharge

Total N pre load	.12 kg/yr	
Total N post load	1.41 kg/yr	
Target N load reduction	70 %	
Target N discharge load	.42 kg/yr	
Percent N load reduction	98 %	
Provided N discharge load	.03 kg/yr	.07 lb/yr
Provided N load removed	1.38 kg/yr	3.04 lb/yr

Phosphorus

Surface Water Discharge

Total P pre load	.011 kg/yr	
Total P post load	.317 kg/yr	
Target P load reduction	80 %	
Target P discharge load	.063 kg/yr	
Percent P load reduction	98 %	
Provided P discharge load	.008 kg/yr	.02 lb/yr
Provided P load removed	.309 kg/yr	.682 lb/yr

Summary Treatment Report Version: 4.3.5

Project: Lullwater Apartments Date:3/28/2023

Analysis Type: Specified **Routing Summary**

Removal Efficiency

Catchment 1 Routed to Catchment 2
Catchment 2 Routed to Outlet

BMP Types:

Catchment 1 - (DA - Basin 2) Retention

Catchment 2 - (Catchment 2 DA - Basin 1) Retention

Based on % removal values to the nearest percent

Total nitrogen target removal met? **Yes**

Total phosphorus target removal met? **Yes**

Summary Report

Nitrogen

Surface Water Discharge

Total N pre load	3.03 kg/yr	
Total N post load	32.95 kg/yr	
Target N load reduction	70 %	
Target N discharge load	9.89 kg/yr	
Percent N load reduction	99 %	
Provided N discharge load	.38 kg/yr	.84 lb/yr
Provided N load removed	32.57 kg/yr	71.82 lb/yr

Phosphorus

Surface Water Discharge

Total P pre load	.276 kg/yr	
Total P post load	7.386 kg/yr	
Target P load reduction	80 %	
Target P discharge load	1.477 kg/yr	
Percent P load reduction	99 %	
Provided P discharge load	.085 kg/yr	.19 lb/yr
Provided P load removed	7.301 kg/yr	16.098 lb/yr

PUBLIC SCHOOL STUDENT GENERATION CALCULATION FORM

PROJECT # DR22-000038 **APPLICATION DATE** December 5th, 2022

NAME & DESCRIPTION OF PROJECT Lullwater Apartments @ Fort Clarke Blvd.

TND with 298 residential units, 18,750 sf of office uses and 6,250 sf of retail uses.

PROJECT ADDRESS (Contact 911 Addressing @ 352.338.7361) 1404 Fort Clarke Blvd.

Gainesville, FL 32606

Tax Parcel Numbers 06326-001-000

Acreage 25.64

DEVELOPMENT DATA (check all that apply)

☐ Single Family Number of Units
☑ Multi Family Number of Units 298
☐ Exempt (See exemptions on page 2)

Level of Review ☐ Preliminary ☑ Final ☐ Revised Preliminary ☐ Revised Final

A determination that there is adequate school capacity for a specific project will satisfy requirements for review for school concurrency for the periods of time consistent with the Interlocal Agreement and specified in local government land development regulations; an agreement by the School Board with the developer and local government is required to extend the period for approvals for phased projects beyond the generally applicable time period

EXPLANATION OF STUDENT GENERATION CALCULATION

Student Generation is calculated based on the type of residential development and the type of schools. The number of student stations (by school type - Elementary, Middle and High School) used for calculating the school concurrency impacts is equal to the number of dwelling units by housing type multiplied by the student generation multiplier (for housing type & school type) established by the School Board. Calculations are rounded to the nearest whole number. Student Generation for each school type is calculated individually, to assess the impact on the **School Concurrency Service Area (SCSA)** for each school type (Elementary, Middle and High School).

SCHOOL CONCURRENCY SERVICE AREAS (SCSA) FOR PROJECT LOCATION

Based on the project location, please identify the corresponding School Concurrency Service Areas for each school type. Maps of the SCSAs may be viewed on the Alachua County Public Schools website.

SCHOOL CONCURRENCY SERVICE AREAS (SCSA)

Elementary Southwest Alachua **Middle** Fort Clarke **High** Buchholz

SINGLE FAMILY RESIDENTIAL DEVELOPMENT STUDENT GENERATION CALCULATIONS

ELEMENTARY	0	**units X 0.12 Elementary School Multiplier**	0	**Student Stations**
MIDDLE	0	**units X 0.06 Middle School Multiplier**	0	**Student Stations**
HIGH	0	**units X 0.09 High School Multiplier**	0	**Student Stations**

MULTI FAMILY RESIDENTIAL DEVELOPMENT STUDENT GENERATION CALCULATIONS

ELEMENTARY	298	**units X 0.06 Elementary School Multiplier**	18	**Student Stations**
MIDDLE	298	**units X 0.03 Middle School Multiplier**	9	**Student Stations**
HIGH	298	**units X 0.03 High School Multiplier**	9	**Student Stations**

EXEMPT DEVELOPMENTS (click all that apply)

☐ *Existing legal lots eligible for a building permit*

☐ *Development that includes residential uses that has received final development plan approval prior to the effective date for public school concurrency, or has received development plan approval prior to June 24, 2008, provided the development approval has not expired*

☐ *Amendments to final development orders for residential development approved prior to the effective date for public school concurrency, and which do not increase the number of students generated by the development*

☐ *Age-restricted developments that prohibit permanent occupancy by persons of school age, provided this condition is satisfied in accordance with the standards of the Public School Facilities Element or the ILA*

☐ *Group quarters that do not generate public school students, as described in the ILA*

CERTIFICATION

PROJECT NAME : Lullwater Apartments **PROJECT #:** DR22-000038

This application for a determination of the adequacy of public schools to accommodate the public school students generated by the subject development has been reviewed for compliance with the school concurrency management program and in accordance with the ILA. The following determinations have been made:

☑ **Approved** based upon the following findings (see 2022-2023 Capacity Tables)

Elementary SCSA Southwest Alachua — Capacity Required 18

- ☑ Capacity Available — Available Capacity 623
- ☐ Capacity Available in 3 yrs — Available Capacity
- ☐ Capacity Available in Adjacent SCSA — Available Capacity

Middle SCSA Fort Clarke — Capacity Required 9

- ☐ Capacity Available — Available Capacity -53
- ☐ Capacity Available in 3 yrs — Available Capacity
- ☑ Capacity Available in Adjacent SCSA — Available Capacity 930

High SCSA Buchholz — 9

- ☐ Capacity Available — Available Capacity -519
- ☐ Capacity Available in 3 yrs — Available Capacity
- ☑ Capacity Available in Adjacent SCSA — Available Capacity 843

☐ **Denial** for reasons stated
