

Job Outlook For Community Health Workers

Percent change in employment, projected 2022-32

Note: All Occupations includes all occupations in the U.S. Economy.

Source: U.S. Bureau of Labor Statistics, Employment Projections program

Employment of community health workers is projected to grow 14 percent from 2022 to 2032, much faster than the average for all occupations.

About 8,000 openings for community health workers are projected each year, on average, over the decade. Many of those openings are expected to result from the need to replace workers who transfer to different occupations or exit the labor force, such as to retire.

Employment

Community health workers will continue to be needed to help organizations and government agencies provide people with health-related information, such as how to access medical services. Demand for these workers will also stem from their role in implementing public health initiatives, including preventive measures to reduce the spread of disease.

Employment projections data for community health workers, 2022-32

Occupational Title	SOC Code	Employment, 2022	Projected Employment, 2032	Change, 2022-32		Employment by Industry
				Percent	Numeric	
Community health workers	21-1094	67,200	76,600	14	9,400
